Battle to the death . . . in our challenging

GRID WARRIOR

Make the most of your Plus 1

Creating Mode 7 on the Electron

Ground rules for games writers

Slogger Master Ram Board reviewed

Hardware prizes to be
won in two free
contests!

The 5 1/4" disc version of Elite now includes:
 • The standard Model B, B+ game
 • The 6502 Second Processor version
 • The Master 128 or Turbo version

BBC Micro Models B, B+

BBC Master Series

Elite, the widely acclaimed 3-D space game, is the highest-selling game ever published for the BBC Micro and Acorn Electron. It is now available in enhanced versions specially produced for the 6502 Second Processor and the Master 128 Series.

In **Elite**, all players start as equals. With the initial rank of "Harmless" you will embark upon an experience unlike any that you have known before. You will be a space trader who roams the universe, making your living from buying and selling the cargo in your Cobra space craft. On your travels, you will encounter aggressors who are eager to put an end to your dealings.

Only the fittest will survive.

As you establish yourself as a survivor, you will win the right to a higher rank.

In all, there are nine, from "Harmless" to "Elite." And your computer will continually tell you where you stand.

Trade with 2,000 planets in eight galaxies

Besides survival, your success also depends on the rewards you reap from the cargo that you carry.

That cargo can be anything from foodstuffs to contraband. If you decide to trade in contraband, the rewards will certainly be higher. But so will the risks you take.

To ply your trade, you can dock at any of the 2,000 planets in eight galaxies.

However, before you dock, you must use your wits to assess the planet's political climate and the perils which may be waiting for you.

Also, in any of the eight galaxies, you may find yourself being asked to perform acts of considerable heroism and selfless courage.

Although these will bring you into danger, they can bring considerable rewards too.

Are you ready to accept the challenge?

The 5 1/4" disc version of Elite features a dual format design which allows Elite to be run under the following configurations:

- BBC Micro Models B and B+ with either a 40 track or 80 track disc drive
- BBC Micro Models B and B+ with 6502 Second Processor and 80 track disc drive
- BBC Micro Master 128 or Turbo with 80 track disc drive

Acorn Electron Cassette	£12.95
BBC Micro (Models B, B+) Cassette	£12.95
BBC Micro 5 1/4" Disc	£14.95

FRENCH

on the RUN!

£9.95
cassette

The adventure game with a big difference.

**You're on
your own in
Occupied
France —
facing the
toughest test
that a British
pilot has
ever had to
experience!**

The year is 1943. As an RAF officer stranded in Occupied France you have one aim — to get back to Britain.

The only way to do this is to try to pass as a Frenchman, but if your French isn't good enough you risk capture and interrogation by the police or even the Gestapo.

Even the simplest tasks — from buying food to taking buses — place you at risk. And to add to your problems you've got limited funds: "Should I hitch a lift or take the train?", "Do I sell my belongings or get a job?"

Whatever you decide to do, time is short. And there are always people willing to denounce you...

French on the Run is that rare combination: A truly educational program that's also a thoroughly enjoyable game. This text adventure not only tests your grammar and vocabulary, but your knowledge of France and the French way of life.

And as your French improves the language problems get harder and the situations become progressively more dangerous. There are four routes to complete in sequence — you need the password from the last before attempting the next. The standard of French required is about O level, though on the last route it rises to just below A level.

And there's a chance for you to try out the French you'll learn in practice: We are offering a FREE WEEKEND IN PARIS as a prize to the first person to get back to England alive, having broken a code near the end of the final route.

For teachers: French on the Run uses multi-choice questions with randomised distractors, all carefully chosen to illustrate linguistic points or points concerning things French. The program is meant for individual assessment, but can be used just as effectively for classroom work. A sealed envelope contains details of how the secret passwords are created.

Traditional fireboat salute for the Sir Francis Raleigh as she enters Cairns harbour

Round the world Electron sails on

TO a traditional fire-boat welcome, the Sir Walter Raleigh steamed into the harbour at Cairns, Australia recently on the latest stage of its round-the-world adventure.

The ship had completed a 7,500 miles trans-Pacific journey from Southern Chile, undertaking scientific studies and community projects at a dozen islands on the way.

The 20 young men and women on board, between the ages of 17 and 24, are doing important scientific work for Operation Raleigh wherever the vessel stops.

But in their leisure time they can often be found at the keyboard of one of the Electrons with which the expedition has been equipped.

The venturers, as they are called, have taken a selection of Electron games and entertainment software with them to enjoy when off-duty.

Reports filtering back to *Electron User* say their favourite program is the one that allows them to use the micro as a chess partner.

In a more serious vein the venturers use the Electron to learn and practice morse code and for touchtyping self-tuition.

The Sir Walter Raleigh is currently anchored near the Great Barrier Reef where marine archaeologists from the Queensland Museum are diving to retrieve relics from a

£1 million show spending spree

A £1 MILLION plus spend by visitors to the Christmas Electron & BBC Micro User Show provided the biggest ever cash sales bonanza for the event.

Once again the Electron took centre stage, almost eclipsing the BBC Micro in the process.

"If only companies would appreciate just what the demand is like for Electron products, then there would be so many more firms in this sector", said John Huddleston, managing director of leading supplier Advanced Computer Products.

The opening day set the trend when all previous attendance figures were

broken as visitors took part in a mass pre-Christmas shopping spree.

Exhibitor after exhibitor reported demand at an all-time high as they were confronted by people eager to part with their money.

"When the doors opened you would have thought they were rushing in to take advantage of Harrod's sale", John Huddleston told *Electron User*.

"They've come to look on this event as providing real bargains – and they obviously weren't disappointed".

In all almost 1,000 special offers were available during the course of the three day event. And of these almost

half involved Electron products.

One customer alone – Craig Thomas, a teacher from Reading – spent more than £700 during a five hour visit on the Friday.

"I bought the Electron when it first came out and I've attended all the shows", he said.

"The beauty of them is that the bargains are such that they save you far more money than you spend.

"If you are an Electron user you just can't afford to miss the shows.

"Unless something drastic happens I'll be going up to the next one in Manchester in March".

Scouts troop runs on an Electron

SCOUT troop leader Dave Beckingham has good reason to be grateful for his daughter's Electron.

Borrowing the machine means he can spend one night a week less on his paperwork.

Keeping records is a major part of running

the 1st Knutsford Scout Troop in Cheshire.

At any one time there are more than 20 boys aged 11 to 16 in pursuit of four different progress badges, each of which requires the completion of up to 18 items before it can be awarded.

In addition the same boys could be chasing any of the 80 or so proficiency badges open to them.

Keeping tabs on where each boy stands in the various categories could be a massive administrative headache for Dave if he didn't have

the Electron.

"I used to spend half my time filling in little bits of paper, then trying to find them afterwards", he told *Electron User*.

"Now I have a complete up-to-date record on disc of what each boy has achieved and when

he earned his qualifications.

"I'm thinking of extending the system to include records for the cubs also. And it's even portable - I can take the Electron and disc files to troop meetings and run the machine off a 12 volt car battery!"

Stand that says Thanks

WHEN tubular steel furniture manufacturers Roland Davies and Howard Bevan decided to produce their first computer workstation they chose an Electron to build it around.

It might seem an unusual selection, given the choice of any number of more celebrated machines, but the explanation is quite simple.

As Roland Davies says: "I've had an Electron myself for three years and it really

got me interested in computing.

"Designing our MicroDesk with the Electron in mind was partly a way of saying thank you for all the pleasure the machine has given me.

"My Electron cost me nearly £200 - a vast sum compared to recent prices - but it has been worth every penny, both at home and in the office.

"I've written games and business accounting programs on it, and despite having been back and forward between my house and office like a yo-yo it has never let me down.

"Naturally I've upgraded the machine since my early computing days. I now have a Plus 1 expansion unit, a Quill utility for writing adventure games and a Turbo for increased speed.

"Our MicroDesk has been designed to provide plenty of space for a monitor, keyboard, cassette recorder or disc drive, printer and software - and at the same time leave enough room for your book and workpad.

"And because it is built to the same standards as our tubular steel contract furniture, it offers a level of quality and construction suitable for school or office as well as home use".

MicroDesk, from Davies & Bevan Furniture, costs £38.95.

Santa was really big attraction

FATHER Christmas's decision to go online for the festive season proved a major attraction for the kids - even for some rather big ones.

What else could account for the electronic requests for Porsches, pay rises, Swedish au pairs and Page Three girls which flooded into the North Pole?

Yet another first for MicroLink, the UK's leading electronic mail service, SantaLink attracted some 1,000 messages in the first week alone.

And of these more than one

third are believed to have come from adults.

With Santa hooked up to the giant MicroLink central computer, all that was needed to contact him was any home or office micro.

"The response was quite incredible", says Derek Meakin, head of MicroLink. "It seems that adults enjoy sending messages to Father Christmas just as much as children do.

"Mind you, what he made of some of the more grown-up requests is beyond me..."

Learning on the Electron

THREE new learning programs for the Electron have been released by HS Software.

Entertaining English is a two program pack teaching language skills to children between 7 and 11.

The first part, Timeslip, displays sentences containing present tense verbs. A rocket collects each verb and travels back in time to an eerie cave.

The player then has to choose the past form of the verb and return to the present with it while avoiding a caveman and manic pterodactyl on the way.

The second part, Busy, performs a range of actions on the screen against a scrolling background.

The player has to type in a verb - at the higher skill level an adverb as well - to describe each of the actions

shown.

If the child describes all the actions successfully they are replayed in sequence to a musical accompaniment with each description highlighted on the screen. Price £7.95.

Adventurous English is a game that helps children to develop grammar and language skills in an entertaining way.

Children gain an understanding of prepositions and develop their problem-solving skills by helping Ben discover treasures and avoid hazards on his dangerous journey. The price is £5.95.

Reading Pack 2a, for ages six to nine, is the latest addition to the Read-Right-Away series and contains two new games to boost reading skills.

RALEIGH

From Page 5

200-year-old ship lying 110 ft beneath the waves.

The wreck is that of HMS Pandora, sent by the Admiralty in 1779 to capture and bring back the Bounty mutineers to stand trial.

The divers themselves also need light entertainment when the day's work ends, so once again the Electrons play their part in the social life of the ship.

Back home, Operation Raleigh is coordinated from centres in London, Leeds and Hull.

One of the present tasks of the computer development workshop in Hull is to create a system for an Electron - currently used for training - to display a commentary on a series of projected slides.

03 10K Gateways Rom Adaptor For Acorn Computers

Advanced

Rom II

Advanced
Computer
Products

1980 ACP Ltd. 6 Ava House, High St. Chobham, Surrey

THE ADVANCED ROM ADAPTOR II

The Advanced ROM Adaptor II

Our versatile cartridge continues to grow in popularity and demand. This ROM/EPROM adaptor is a quality product fully enclosed in an Acorn approved casing, providing full protection for your valuable firmware! A.R.A. 2 not only allows 8K (2764) & 16K (27128) ROMS/EPROMS but also supports 27513 & 27011 devices (when used with the correct software) for which we are currently developing new products. Fully compatible with the Master Computer & Electron Plus I

THIS IS WHAT ELECTRON USER SAID ABOUT A.P.5:-

"Looking at the A.P.5. shows it to be constructed to a high standard, it looks solid and robust. The A.P.5. Interface opens up the new Electron for a whole new type of computing." E.U Dec '86

Orders received by the 17th December should be despatched by 1st class post for christmas (subject to availability). Urgent orders can be despatched by securicor for an extra £6.00 (this service is inclusive for AP4/100 and AP4/400)

AMX MOUSE

POINTS THE WAY FOR THE ELECTRON USER

AMX MOUSE

Catch an incredible AMX MOUSE! The advanced opto-mechanical device that brings to your ELECTRON facilities once only available on more expensive computers. Now you can use ICONS, WINDOWS, AND POINTERS in your own programs

AMX PACKAGE

Plug the MOUSE into the user port, and the EPROM into your A.P.5. The latter contains fast machine code routines for creating on-screen windows, icons and pointers. And means that the MOUSE buttons can be programmed for use with commercial software such as Wordwise and View. There are two manuals included, explaining how to operate the MOUSE and the ROM routines, which are available in both basic and machine code programs

Included in the package are two superb programs:

AMX ART has to be seen to be believed! It's a computer-aided drawing program that's just as good for serious applications - such as the preparation of detailed architectural and engineering drawings or teachers' worksheets - as it is for having lots of family fun! And if you're artistically inclined, you'll be astonished at the quality of work you can produce and save. It makes full use of on-screen menus, pull-down menus and icons: the ideal, easy way for novices to learn and gain in confidence.

ICON DESIGNER is an invaluable program for creating and storing icons for use in your OWN programs

The ACP/AMX mouse package may be used on an ELECTRON fitted with a PLUS 1 & AP5. The 'ART' software is supplied on cassette but can be transferred to DISC (DFS not ADFS)

£69.95

MOUSE PACKAGE + AP5 £125.00

Advanced Computer Products Ltd., 6 Ava House, High Street, Chobham, Surrey. GU24 8LZ Tel: 0276 76545

Advanced Disc Toolkit
containing over 30 commands

Advanced Computer Products

THE FOLLOWING ACP
PRODUCTS
Advanced Disc Toolkit
Advanced Disc Investigator
Advanced ROM Manager
Advanced 1770 DFS
ARE ALL

COMPATIBLE

ADVANCED DISC TOOLKIT

(01) /M/B/E £34.50
Any Acorn user including Master, BBC B+, Electron, DFS, 1770 DFS, ADFS, 2nd & co-processors A.C.P.'s BEST SELLING product containing over 30 commands inc:- powerful memory & disc editor, search memory/disc/basic, catalogue/unplug ROMS, load/run programs below page, automatic menu, file transfer (inc locked cassette files), ADFS utils etc. etc. ("it's superb" - Database Pubs - "A top-class toolkit - I have no hesitation in recommending it" - Acorn User Nov '86) (16K EPROM & FULL MANUAL)

ADVANCED ROM ADAPTOR 2

(03) /M/E+1/ £14.95
An Acorn approved cartridge containing a card with special 'zero' profile sockets that allow you to fit compatible 8K or 16K EPROMS/ROMS. The cartridge is fully enclosed providing complete protection for your ROMS. Simple to use - no switching - complies fully to the Acorn (sideways) Rom Filing System. A.R.A.2 contains 2 sockets.... A single adaptor is also available.... A.R.A.1 (02) /E/ £10.35
"The best ROM cartridge is by far the A.C.P. A.R.A.2" A&B Computing

ADVANCED SIDEWAYS RAM

(04) /E+1/ £29.90
A highly versatile but simple to use s/w RAM cartridge that is automatically write protected on loading. Contains 16K RAM but can be switched (externally) to 2 X 8K RAM. Supplied with instructions & full software support (on cassette) to save ROM images to disc/tape, load RAM from file, Advanced Print Buffer & MakeRom a utility to merge several files from disc to be run from the ROM FS. (S/Ware on disc: please add ... £1 5% DFS .. £2 3% ADFS)

ADVANCED ELECTRON DFS

(06) /E/ £24.15
Electron & Plus 3 users ... gain BBC compatibility by adding the Advanced Electron DFS (1770 DFS) this is the same disc filing system supplied with the BBC B+. Now you can produce and access (compatible) BBC disc based software. A.C.P. also supplies 5 1/4" disc drives to add to your Plus 3 (inc. 2nd drive adaptor). "ACP has produced another superb ROM for the Electron" - Electron User Feb '86
(supplied on 16K EPROM + DFS MANUAL)

ADVANCED DISC INVESTIGATOR

(06) /M/B/E/C/ £28.75
A very powerful Disc utility for standard & non-standard discs. Backup most protected discs, edit any type of non-standard disc, check & repair faulty tracks, create new disc formats, copy 40track discs to 80track discs, verify two non-standard discs. ("ADI features an extremely comprehensive sector editor, and one of the finest I've seen" - Tublink on Prestel)
(supplied on 16K EPROM + manual)

ADVANCED ROM MANAGER

(07) /M/B/E/C/ £14.95
A friendly utility for ROM & sideways RAM. Examine ROM/RAMs, load files into RAM, move memory to/from S/Ways ROM/RAM, catalogue/kill ROMS, offer commands to specific ROMS, save ROMs to disc/tape, AUTOROM a file (inc. BASIC) to run from S/Ways ROM/RAM, execute specific machine code subroutine in a ROM, generate a ROM's checksum & CRC.
"Representing amazing value for money. Go out and buy this real bargain." E.U Dec '86

ADVANCED PLUS 4

(08) /E+1/ £79.98
"Disc drive compatibility at long last" ... Electron User June '86. "The AP4 should be considered the standard interface for the Electron" ... Acorn User July '86. This sums up AP4 & ACP's approach to producing products. AP4 is a fully ACORN compatible disc i/face & will accept any standard drive inc. PSU, runs 1770 DFS (as fitted in the B+ & Master), keeps page & E00, utils in ROM & provides a spare rom socket. "ACP's Plus 4 comes out on top. I can recommend it to anyone" ... Electron User, June '86.
AP4 packages + D/Drive, AP4 100/AP4 400

ADVANCED PLUS 5

(09) /E+1/ £66.70
A triple interface cartridge providing...
1) a TUBE i/face allowing a second processor to be connected, increasing BOTH speed & memory (PAGE & BEE HIMEM & BEE in all modes)
2) a 1 MHz BUS for control applications & prommers
3) the USER PORT for mouse and graphic devices.
Also contains 2/3 ROM sockets and on board operating software for 2nd processor.

ADVANCED 1770 DFS

3 versions ADM (11) - ADB (12) ADE (13) £34.50
ACP have totally re-written the Acorn 1770 DFS, enhancing existing features & adding new ones. The result is probably the fastest & most powerful disc filing system your computer could have. With the ability to operate in double density occupying both sides of the disc (540K). Automatic file relocation, improved file handling, 62 file catalogue and Sways RAM can be used as a fast RAM DISC
"An excellent buy for users with a 1770 Disc controller" M.U Dec '86

ADVANCED ELECTRON DFS E00

(14) /E+ASR/ £19.99
An alternative to our AED(05) for Plus 3 and ASR users. This optional alternative DFS is designed for use in Sideways RAM (ASR) and allows the user to operate a disc filing system & BEE when using the Plus 3 (in ADFS page would normally be & 1 Dec). The DFS is simply loaded using the software supplied with the ASR from disc. (optional upgrade for existing AED users £9.50 on return of original EPROM)
(3 1/4" ADFS disc + manual)

EXPIRY DATE (Ref E20)

Hitch your wagon to a Blazing Star

THE festive season is now upon us and hopefully Santa has brought you the goodies you asked for.

This is also the period when software houses — like record companies — swamp the market with their most commercial (and sometimes their best) offerings.

Robico's Blazing Star should be bulging from a few stockings. If you haven't yet got it I really must recommend it.

If you have seen either Ghost Town or Pony Express, Blazing Star is in that vein but ten times better.

Any of you who have played Magus' What's Eeyore's or Locks of Luck — or better still seen Village of Lost Souls on a friend's BBC Micro — will realise what a marvellous adventure house it is.

However, news has it that they are thinking of pulling out of the Electron market because of lack of demand.

It is a small company which

can't afford large national adverts. I would therefore suggest that unless you want to see another super producer of adventures disappear from the Electron scene, you should write to them to prove where the market is.

The address is: Magus, 4 Toronto Close, Durrington, Worthing, West Sussex. BN13 2TD.

Meanwhile at Melbourne House, Trevor Lever and Peter Jones have penned another spoof adventure called Dodgy Geezers. To date it is only available for the Commodore — let's hope an Electron conversion is forthcoming soon.

I have recently been sent a copy of Adventure Soft (UK) Scott Adams Hint book. At £2.99 it is a bargain and a must for any adventure fan.

Adventure Soft (UK) — formerly Adventure International — has also informed me that all 30 of its adventures, including 10 budget price titles, are now available for the

Electron.

The most recent text adventure, Rebel Planet, is riveting. The new address is: Adventure Soft (UK), P.O. Box 786, Sutton Coldfield, West Midlands. B75 7SL.

Christmas is a wonderful time, even for Saxon kings such as I. I always feel humble at this time of year. Mind you, the quality of letters I am continually receiving from readers makes me feel quite servile for most of the year!

But letters such as those sent in by Graham Thompson banish that humility and make me comprehensively noble again.

He has an admirable habit of beginning his letters, "My Lord Pendragon," and signing off, "Pleb to the Court of King Arthur". It's refreshing to know that some subjects still know their place.

I have yet to receive a full solution to Philosopher's Quest, as requested last

month. Don't forget there's a copy of Robico's Myorem waiting for the first solution I pull from my mail bag.

I've had to employ four more ravens this month to deal with all the outgoing mail.

As long as Galahad and Gawain don't ask for a Christmas bonus or something silly like a Holy Grail, I should clear the backlog soon.

Don't let that put you off writing in. I'm always pleased to read your letters, but if you have asked for a full solution to an adventure, please be patient.

I have already been inundated with names of adventures and their publishing companies. The database I am creating now contains more than 300 adventures available for the Electron.

Please keep sending in names of any obscure software house which publishes adventures for the Electron, but don't forget to include: Name of adventure and name and address of software house — Thanks!

Perhaps the most amusing letter I have read since I moved into the cave was sent by a Newcastle fireman, Austin Baird.

Apart from threatening to throw his Electron at the next passing cat, he makes a plea for help in this column to be specific rather than cryptic.

I will try to oblige, Austin. I will add that I don't think you are a "Sub-human cretin" — a tremendous number of people

KNIGHTS OF THE ROUND TABLE

This section is devoted to readers who have offered specific help with a number of adventures. If you write to them please enclose an sae.

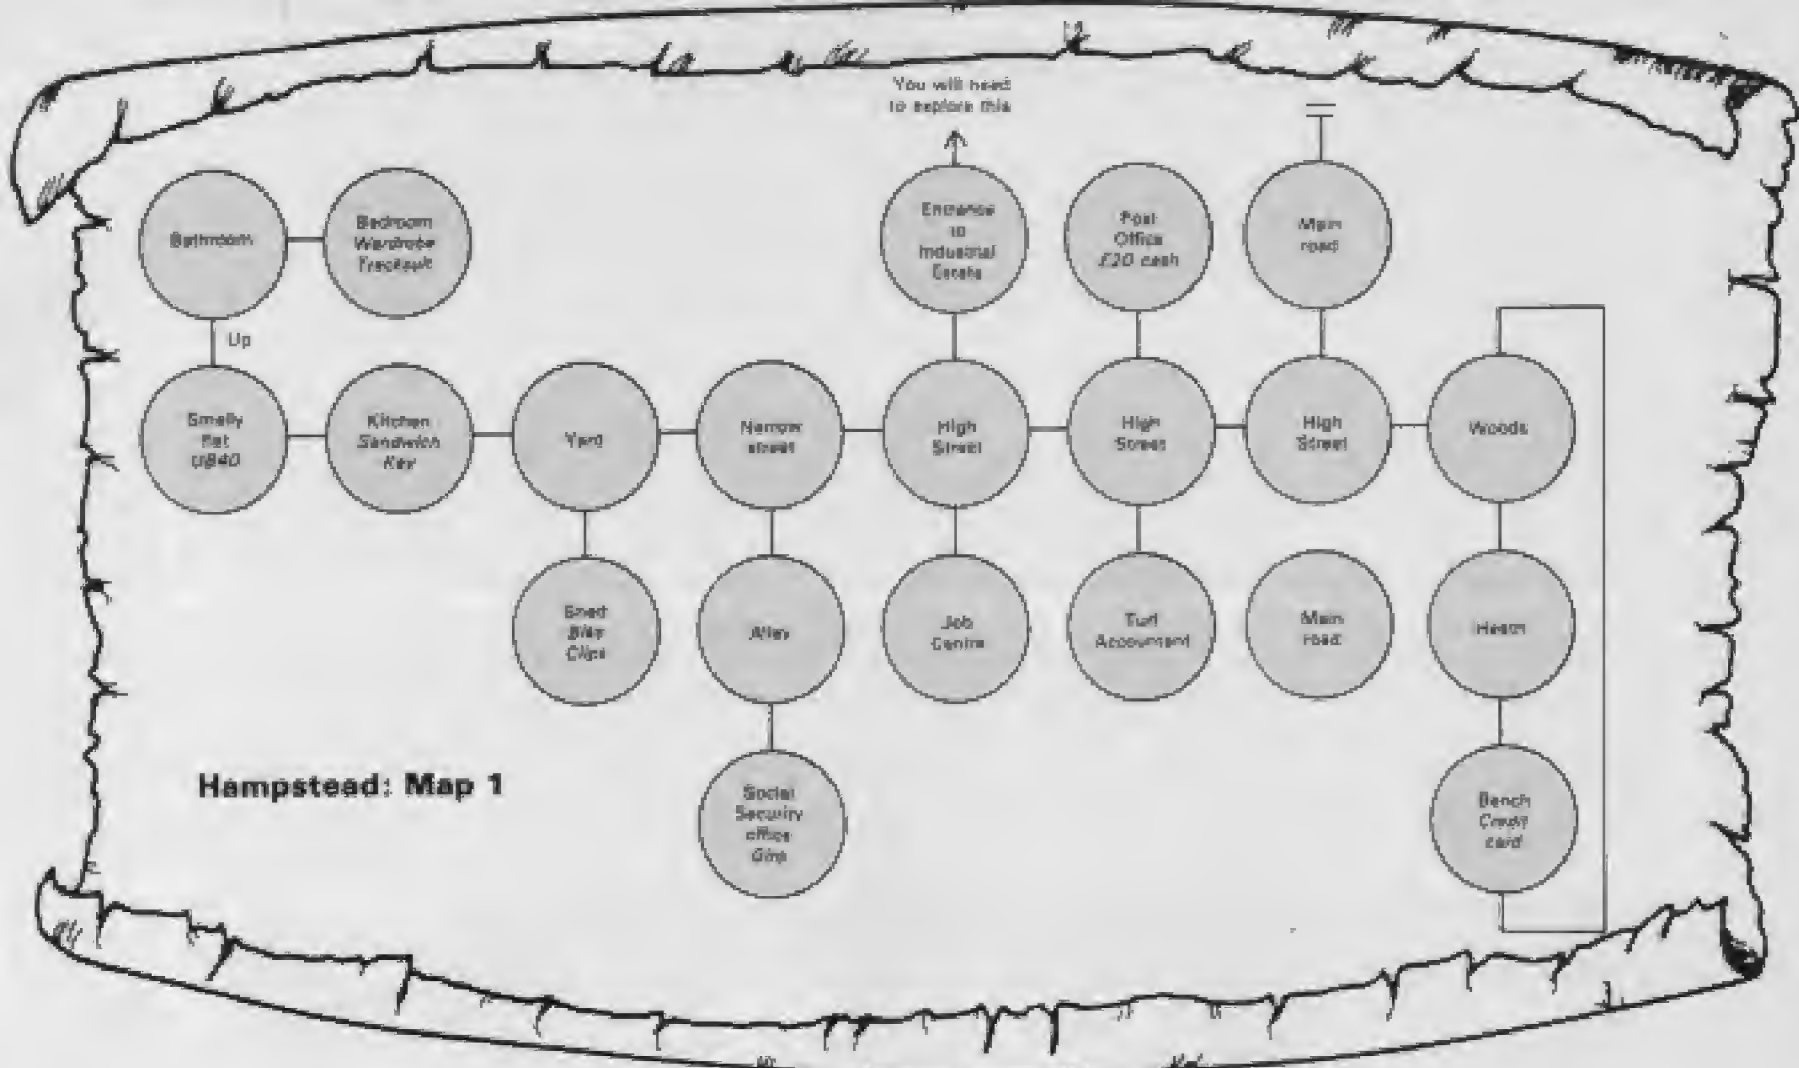

Kneel and rise: Sir P. Shackles of 29 Grosvenor Gardens, Southgate, London N14 4TU who offers help with Hampstead, Gremlins, The Count, Twin Kingdom Valley, Spiderman, Terrormolinos, Stranded, Crown Jewels,

Castle of Riddles, Ring of Time, Dracula Island, Sphinx Adventure, Voodoo Castle, Ten Little Indians, Arrow of Death and Gold Baton.

Sir John Tipper of, 7 Main Street, Newbold Verdon, Leicestershire LE9 9NL who can help with 23 adventures — Sphinx Adventure, Twin Kingdom Valley, Hampstead, Terrormolinos, Pirate Adventure, Wheel of Fortune, Wizard

Arkyrz, Crown Jewels, The Count, Pattigraws Diary, Galilee, Gold Baton, Circus, Woodbury End, Ten Little Indians, Mystery Fun House, Adventure, Classic Adventure, Adventureland, Castle of Riddles, Philosopher's Quest (How about sending me a solution!), and Arrow of Death parts 1 and 2.

Don't forget to give a full description of your problem.

PROBLEMS SOLVED

Despite the reams of help given by Merlin for Sphinx Adventure – including a Special and a full solution in Hall of Fame – I still receive many letters from readers who are experiencing problems.

So, for Debbie Dell, Daniel Gilbert, Martin Forrer, Frances Atkinson, W.A. Smith and hundreds of others, this short listing may help.

It was kindly sent in by Simon Doyle of Taunton and enables you to program the function keys. It should be entered and run before chaining Sphinx. You can change the commands to suit your own needs.

```
10 REM DEFINED KEYS
20 REM FOR ACORN/50T'S
30 REM SPHINX ADVENTURE
40 REM BY SIMON DOYLE
50 *KEY1*60 NORTHIN*
60 *KEY2*60 SOUTHIN*
70 *KEY3*60 EASTIN*
80 *KEY4*60 WESTIN*
90 *KEY5*TAKE *
100 *KEY6*KILL DWARFIN*
110 *KEY7*NOIN*
120 *KEY8*AXEIN*
130 *KEY9*GET AXEIN*
140 *KEY0*INVENTORYIN*
150 CHAIN "SPHINX"
```

While on the subject of Sphinx, there are only four locations in the Catacombs Frances, so drop things to help you map them.

Since its re-release on a budget label Twin Kingdom Valley appears to have shot up the popularity stakes again – if it ever left them.

Luke Adams, Stuart Kelly and Helen Knight have all asked where they can find the jug of gold. You should take the jug from the cabin and fill it at the River of Gold, which is beyond the rock fall in the sloping maze.

The treasure chest is in the south turret of the castle, Stuart.

Stuart Kelly and many others seem puzzled as to how to deal with the numerous creatures you meet in your journey through Twin Kingdom Valley.

Elves are always friendly, as is the giant who will carry things for you. Live and let live is a good maxim, but if they are carrying treasure you will have to bash them.

The most potent weapons are the mace, axe and sword, but save the wooden staff for dragons and witches.

Richard Milligan is having problems with the Forest King. Take him the big diamond – you can pinch it back later – wear the amulet and rescue his daughter to be rewarded with a silver key.

Compared to Ken Brown's dilemma (do you play golf, Ken?) most other readers' problems seem quite trivial. Ken is threatening an odd form of suicide using his version of Hampstead unless I help him finish this adventure.

To win myself a life-saving certificate, here goes:

Satisfy Chubby Fish as I hinted in last month's column then: N – GET CAR – N – W – S – S – S – DROP CAR – W – DROP SUIT – GET TRACKSUIT – WEAR TRACKSUIT – E – GET CLIPS – WEAR CLIPS – GET BIKE – RIDE BIKE – N – N – E – E.

I hope that's not too cryptic for you, Austin! I also hope that I have helped Jonathan Ewing (any relation?) and many other readers who were stuck at the end of this adventure.

I would like to thank Mr W.E. Trevelyan for his most informative and helpful letters, particularly his help with

Woodbury End and The Ferryman Awaits.

For those of you who have experienced problems with the save/load facility in Woodbury End, he has sent me an excellent listing to overcome this hassle. I'll print it next month in this column. If you send me a list of your adventures, Mr Trevelyan, I'll return a top piece of software to you.

It certainly seems to be the month for listings. Nigel Kershaw has sent this super little cheat for all Adventure Soft games: Load the adventure as normal then quit and press NO when it asks if you want another game. Then type the following four-liner:

```
1 VDU 14
2 FOR X=&E00 TO &FFFF
3 IF ?X>31 AND ?X<127 THEN
PRINT CHR$ ?X;
4 NEXT
```

Hey Presto! Use Shift to scroll and see for yourself.

Finally, if anyone requires a full solution to Woodbury End or Stolen Lamp, please send an aae.

From Page 11

find adventures difficult to begin with.

J. Keighley has written in to say that he has completed Sphinx Adventure in 299 moves. Well done Mr Keighley – can anyone better that?

I would like to thank Ben Hughes of Hereford College of Art & Design for the superb graphic letter-heading he sent me. Thanks, too, to Shella Beattie and Matthew Pyecroft for their mass of ideas for this column. I will consider them all and may even use a few – watch this space.

You will notice this month

that the Lords of Adventure box has disappeared. Don't fret, it has simply been replaced by Knights of the Round Table – after all, we all end up going round in circles trying to solve these adventures.

A large number of readers have asked for help in mapping adventures. I have produced an adventure mapping grid which some readers may have already seen.

If you would like more details on how to obtain one of these grids, write to me, but don't forget to enclose an s.a.e. Also watch my Beginners' section for more specific help

in future issues.

I will also try to continue Merlin's habit of producing a map of a small part of an adventure each month.

As you can see, this month I begin with Hampstead, and you'll also find the following hints helpful:

- You ought to wear something.
- A UB40 isn't a pop group in this instance but a means of getting money.
- Don't risk spoiling your tracksuit with bicycle oil!
- Don't fritter your money away.
- A rest on a bench will do you good!

OVERTURE AND BEGINNERS

Last month I introduced this section by suggesting some things to look out for when buying your first adventure. This month I shall try to offer help now you have got that prized piece of software home.

It perhaps sounds obvious – but we all often miss the obvious – read the Inlay card or enclosed information carefully before loading your adventure.

They often give vital information or important help to get you started.

For instance, the small card enclosed with Adventure Soft's Voodoo Castle is priceless to the novice adventurer.

It tells you to set page to &E00 before chaining the program.

This is especially important if you have a Plus 1 or DFS fitted and want to avoid the nuisance of waiting five minutes before discovering a Bad mode or No room message.

The card also informs you that the adventure only accepts one or two word input – usually in the form of verb-noun.

And it lists a sample of the vocabulary: Go, Take, Drop, Climb, Enter, Leave, Move, Quit, Wear, Read, Light, Pull, Push and Look.

Wave, Dig, Mix and Drink are other useful words which are worth trying.

My usual practice with any new adventure is to load it and then spend up to an hour just playing around, discovering opening locations and experimenting with vocabulary.

I do this purely to get the feel of the adventure and at this point make no attempts at mapping or making serious inroads into the game.

So with Voodoo Castle it soon becomes apparent that there is a coffin and the body of Count Cristo at the starting location and that magic is workable in this adventure.

Thus when you discover a sapphire ring and later a stone door with a sapphire set into it there appears to be an obvious magical link.

After a bit of examination and experimentation, WAVE RING reveals an interesting variation on OPEN SESAME.

Such is a typical example of problem solving in a simple adventure like Voodoo Castle.

Further exploration reveals all manner of magical apparatus – an iron pot of witch's brew, chem tubes, chemicals, a rabbit's foot, a four leaf clover and so on.

Most problems can be solved by careful experimentation with the objects and workable vocabulary.

If you are still desperate most adventure software houses provide hint sheets in return for an s.a.e. Or you can always try writing to me.

Next month I will look at beginning to map an adventure.

THE ADVENTURE CREATOR

The HIGHLY ACCLAIMED Adventure generating system is now available for the Electron computer. You can create your own professional 'stand alone' adventure games with **The Adventure Creator**. The intelligent command interpreter can handle complex sentences and multiple input commands in your own adventures. Extensive text compression allows you to produce more numerous and detailed location descriptions.

Some of the many features include a full function editor, automatic word formatting, a logical command interpreter and an abbreviated input acceptance facility.

An EXTRA feature, added specially for the Electron Adventure Creator, is the additional command 'chain' that allows you should you so wish, to create MASSIVE multi part adventures.

Unleash the power of your imagination now! The Adventure Creator for your Electron or BBC. Available from all leading retailers or direct from Incentive on (07356) 77288.

INCENTIVE SOFTWARE LTD. 2 Minerva House, Calleva Park, Aldermaston, Berks RG7 4QW.

Nasties in the cavern

Program: *Thunderstruck II (The Mindmaster)*
Price: £7.95
Supplier: Audiogenic, PO Box 88,
 Reading, Berks.
Tel: 0734 303663

AS *Thunderstruck II* loads you are left watching quite a well drawn title screen, which is rather a blessing as it takes around seven minutes. However, your patience will be rewarded as the game is well worth waiting for.

In this arcade adventure you start complete with spacesuit and helmet in an underground cavern. You are immediately required to dodge the advances of something that bears a close resemblance to a berserk helicopter.

You then make your way through the various screens which present you with a whole host of evil nasties, all intent on reducing your life expectancy.

Your current state of health is shown on screen. If it falls to zero you

will be whisked right back to the underground cavern as you only have the one life.

As you pass through the various rooms you will discover a number of items which can be picked up and used elsewhere to further your travels.

The problem that you have to work out is where, how and when each of the items should be used. And to add to your problems you are only allowed to carry one item at a time.

A score is shown on screen which represents your percentage achievement to date – mine remained depressingly low.

Approximately two thirds of the screen is used as the game area – the remainder is used for memory storage. This area does remain blank so you are not distracted by rippling colours.

The graphics are excellent with big chunky sprites and very smooth movement. The sound effects were adequate but they could have been a little more imaginative. However, there is a facility to turn them off if they become too annoying.

My only reservation is whether the game may pall a little once all the problems are solved, but in my case that could take forever anyway. The game does use rather a lot of memory so Plus 1 and Plus 3 owners should ensure that these are disabled before this program is loaded.

I found the game extremely addictive and while it comes from the same software house that brought us *Bug Eyes II*, which has a similar style of graphics, I found this to be the more entertaining of the two. **Beejay**

A castle with style

Program: *Ravenskull*
Price: £9.95
Supplier: Superior Software, Regent House, Skinner Lane, Leeds LS7 1AX.
Tel: 0532 459453

THE evil Baron Strieg has stolen the silver crucifix. Without its protection the village of Austburg is powerless against the zombies which inhabit the local swamp.

To save the village you must enter Ravenskull castle and locate the four parts of the crucifix.

Before starting this arcade adventure you select whether you are to be an elf, wizard, warrior, or just an ordinary run-of-the-mill adventurer.

This appears to determine what sort of treasure you collect as you explore the castle. Wizards collect crystal balls, warriors get shields, and so on.

The screen display is divided into two main areas. The first is the status section, which shows your score, health rating, number of lives and what you are carrying.

The rest of the screen forms a large window into the castle and you are

treated to an aerial view of yourself and your immediate surroundings.

As you walk in one of the four possible directions the screen scrolls smoothly in that direction revealing more of the castle. The graphics used are some of the best I have seen on the Electron.

The playing area is 64 times the size of the action window.

There are four levels to the castle with one quarter of the crucifix hidden in each and you can only pick up a piece of crucifix when you have collected every item of treasure on that level.

As you might expect the castle is constructed like a giant maze, with sections closed off by different types of door.

Some of these can be opened using keys, but although they all look the same each one will only open one specific door.

Every time you play the game the objects are in the same position so you quickly learn where to find them.

Apart from keys you will find magic scrolls and potions which will give you special powers – or poison you!

Some of the castle's nastier

residents are the ravenbees. These follow specific routes along some of the corridors, and you will need split second timing to avoid these little beauties.

I loved *Ravenskull* – there is a genuine feeling of satisfaction when you guess the correct use for an object or gain access to a new section of the castle.

The puzzles are devious and the correct route is not always obvious but you know instinctively when you're on the right trail.

BATTLE ZONE SIX

Play the most hectic battle of your life in the ultimate Zap game!

The myriad of aliens use virtually every screen movement imaginable, all with one purpose – to get you!

And would you believe 100 – yes, 100 – different screens. Never before achieved.

Base and firing control in eight directions. Pause control to enable saving to tape. Shield control. Sound on/off. Speed control.

One of our best ever and sure to be a real winner. To be released at £7.95.

Pre-release offer at just £4.95

WORD PROCESSOR

This is the one designed for the two finger typist and has received rave notices over the past two years. It allows continuous typing, with no need to look at the screen, with line ends, margins and everything else automatically sorted out at the printing stage by the Embedded Control Characters – as used by professional word processors.

You can automatically move left margin, decrease characters per line, centre text, right flush, new line, new paragraphs, new page, underline, and enlarged, emphasised and condensed characters.

All main controls toggle on the function keys, which are: Add, Edit, Search, Replace, Save text, Load text, Inform, Exit processor, Enter processor, Delete text, Insert buffer, Clear buffer, Format.

It will do many other things, printing either continuous or single sheets, emphasised or draft copy, double or single spacing, adjustable page length and optional page numbering. Editing and Insertion is simplicity itself and a buffer allows 255 characters to be moved anywhere.

Complete with extensive User Guide giving actual examples.

Catalogue price £22.50. Sale price £9.95

MICROTYPE

Now firmly established as the 'standard' typing tutor for the BBC and is now used in over 200 colleges and schools and in training by ICI, NCB, Shell, Boots, Post Office, British Telecom, etc.

The program gives both exercises and sentences with a complete analysis of your average typing speed, accuracy and the keys mis-typed. If you wish to master the computer keyboard, then this is the program for you. You will benefit even after the first lesson!

Catalogue price £12.50. Sale price £5.95

We operate a first class return post service, whether payment is made by cheque or credit card. Telephone orders by Access, Barclaycard or Diners before 4pm will be in our private collection at 4.30. If a program fails, no matter how caused, it will be replaced absolutely free of charge, this year, next year or in ten years...

So though the cowboys are deserting the Electron fast, Kansas will most certainly be here!

PRICES INCLUDE VAT AND POST

Nothing extra to pay!

Kansas

Kansas City Systems, Unit 3, Sutton Springs Wood, Chesterfield, S44 5XF. Tel. 0246 850357

Top games at £3.95 each!

"Ten out of ten for value" – Electron User

LOONY LOCO

The new Arcade from Kansas—a four in one game with four entirely different and active, colourful screens. Drive the Loco, switching lines, firing harpoons and smoke to evade the rockets and planes. Then get to the buffet car by jumping the gaps and avoiding the cannon balls and arrows. If you make it, then it will be all out catching the spinning cups from the three tables. Then as you come to a standstill, in the last screen you have to find out how to release the brakes.

MOON BUGGY

Catalogue price £8.50

An ultra active arcade game which outsold everything when on display at the last Micro User exhibition. Needs no small amount of skill to get past the first level and there are seven of them! Manipulate the Buggy three different ways as the ground speeds by and at the same time use the different firing directions to splat or jump the many obstacles. There are craters, boulders, debris, mines, tanks and bridge traps. Spacecraft and rockets all add to the excitement. This is a very challenging one, with single hazards, multiple hazards and even combination hazards. Multiple scenes with fast fluid action.

PINBALL ARCADE

Catalogue price £10.35

The only game ever to achieve FIVE five star reviews in the Press! Now faithfully converted to the Electron, with all the original BBC features, and running at the correct speed. Build your own pinball tables from the many bumpers, targets, slings, etc., from the six pages of colourful shapes, moving or re-moving anywhere on the board. Adjust tilt, bounce and even alter the scores. A most realistic spring action and even the strength of the flippers are adjustable. After a board has been created, it can be saved to tape, played and even altered again.

THE FERRYMAN AWAITS

Catalogue price £9.50

There's never been anything like it before! An entirely new computer language—TOC—has resulted in cramming a virtual 80K Adventure into the normal Electron! Devised by the programmer, this has resulted in the most involved and devious Adventure ever to appear on the Electron, with literally around half a screen of text depicting each location and objects. Hundreds of real locations and countless objects and things take the adventurer onto a totally different plane. It is the only Adventure to accept more than a two word command. Such as TAKE SKULL FROM SHELF OPEN DOOR is quite acceptable! It will even accept multiple commands. Set in the future, it is a magical quest in a wasteland populated only by fanatical devil worshippers and savage pirate hords, to which you are sold as sacrifice. Do not expect to complete this Adventure in a few evenings, it will take a long, long time. And you will need our Helol service...

Any THREE below for £7.50

SINGLE
COPIES
£3.95

FIGHTER PILOT

Catalogue price £8.50

A true cockpit view of both the runway during take-offs and landings, and the enemy fighters which have to be blasted out of the sky. Graphics include an accurate radar system and a combined artificial horizon and turn and bank indicator. Information shown on fuel, speed, rate of climb, altitude and score. As the fuel gets low, you can switch to approach, land, re-fuel and take off again.

CAVEMAN

Catalogue price £9.50

Take the barrow down the lift into the many galleries of the mine, first to dig for diamonds and then for gold. Astute use of the lift and ladders and you might escape the monsters—or lead them to their destruction. Then go down for coal to re-fuel the furnace, which depletes as you use energy for the lift.

MANIAC MOWER

Catalogue price £8.50

Try to mow the grass in the park whilst avoiding the maniac mower, whose only aim is to cut you up! To make it harder there are lots of nasties lurking in the grass—all out to get you. To make it harder still there is a karate expert training in the park, who is very unfriendly indeed!

HARLEQUIN

Catalogue price £9.95

Played by one, two or four players. Harlequin is a very different sort of game—treasure hunting on the computer! Try to find which of the 14 treasure places the treasure is hidden, using the given clues. In addition to the information, there are lots of different tunes, very well done, with plenty of colour.

MUNCHMAN

Catalogue price £8.50

This is the one that started it all—a real live 'Pacman' for the Electron. It is just like the original Arcade game with ghosties chasing you around as you devour, with all the facilities of the energisers which give limited time to zap the ghosties.

SNAKE

Catalogue price £7.50

Seven hectic levels with split screen and even double split screen make this very active indeed. The snake gets longer as the mushrooms are devoured, but avoid the toadstools at all costs. Ideal for young children, whilst by increasing the speed, active for adults and experts too.

REVERSI

Catalogue price £7.50

The Electron as your partner at Reversi—also known as Othello. Plays to all the rules with accepted black and white counters on a green board. Moves easily entered with very quick responses. All information and scores on the screen.

DRACULA ISLAND

Catalogue price £9.50

This Adventure has started countless people on adventures and provided a great deal of pleasure. The aim is to find and kill Count Dracula before he gets you. It is an ideal starter, needing plenty of effort to solve but not being too difficult to finish. Like all Kansas adventures, it is totally logical, which means things are always in the same place or where you leave them. Also like every Kansas adventure it has a game saving facility. And if you really get stuck, don't throw it away in disgust—give us a ring, for we operate a telephone Help? service!

RING OF TIME

Catalogue price £9.50

The sequel to Dracula, this is a little harder to solve, though still retaining all the features, including the split screen, which means the important information remains on the screen all the time. The object is to retrieve the elusive Ring of Time, going through many trials and tribulations.

REVENGE OF ZOR

Catalogue price £9.50

The long awaited sequel to Dracula and Ring of Time. Somewhat more difficult in this Adventure you have to escape the vortex and the revenge of the evil Zor. This is a natural progression, and the adventurer will find the programmer has become much more devious, thus requiring greater effort to solve.

Football for fanatics

Program: *Goal!*

Price: £6.95

Supplier: Tynesoft, Unit 3, Addison Industrial Estate, Blaydon, Tyne & Wear NE21 4TE.

Tel: 091-414 4611

FOOTBALL relies on several individuals working together as a team, which is one of the main reasons why programmers find the game very difficult to reproduce on the computer screen.

Every football simulation I have ever played involves the player controlling one footballer and trying to score against a computer that knows exactly where you are going.

This program does nothing to break this tradition – it is no worse than the opposition but it isn't any better either.

Goal! is a five-a-side game which is played over 90 minutes. Fortunately this isn't in real time.

I doubt whether there is anyone out there who could play this game for an hour and a half without suffering permanent brain damage.

The game is played on three separ-

ate screens. Kick off occurs in the centre circle and as the ball moves to either side of the screen the display changes to show one of the two goal areas.

This three screen system is one of the game's weak points. You may make a break with the ball and pass all four opposition players while still in the central screen.

As the screen is re-drawn to show the goalmouth you will find that the blighters are waiting for you in their own goal area.

You control the player who is closest to the ball. Occasionally he will be tackled and the ball will bounce towards one of your other men.

However, this new player will not respond to the controls until you press the kick key, so don't forget!

You can tackle a player by getting yourself on the same horizontal plane as the man with the ball and then running at him.

If you're lucky you will emerge from this clash with the ball at your feet. Pounding away at the kick key has very little bearing on the outcome of the encounter.

The computer controlled players all

move forwards together supporting the man with the ball.

Your players stand there like dummies as you race forwards. At least they reappear when you enter your opponent's goalmouth, not that they're much help.

The cassette inlay says that the computer team will adjust its level of play during the game to match your own. It never got down to my level!

If you are desperate to play football on your computer then this game is as good as any.

Mazes to amaze

Program: *Repton 3*

Price: £9.95

Supplier: Superior Software, Regent House, Skinner Lane, Leeds LS7 1AX.

Tel: 0532 459453

JUST when you thought it was safe to go back down the mine Superior Software have released Repton 3.

The game features all the characters and graphics of Repton 2, but is closer to the original Repton in gameplay and objectives.

It comes with 24 challenging levels to complete, stored on tape as three separate files.

On successful completion of each level you are given the password for the next, which means that when you play the game on subsequent occasions you don't have to wade your way through it all again.

When playing the game only a small section of the overall map is visible at any one time.

Each level is laid out like a maze, constructed from boulders, earth, diamonds, giant eggs and many other devilish things.

To complete a level you must kill every monster and collect all the diamonds and a golden crown before a time bomb explodes.

The problems begin as you burrow your way beneath the boulders. As soon as the supporting earth has been removed the boulder falls, killing you or changing the shape of the maze by blocking off a passageway.

For this reason your route through the maze must be very carefully planned – one badly placed rock and you might as well start again.

As in Repton, you can call up a detailed map of the whole level to help you choose the correct path through a maze.

When I first played the game I thought the monsters were pretty tricky to deal with as they have to be lured beneath a precariously balanced boulder and then squashed.

Worse than the monsters are the spirits, Will-o'-the-wisps which whizz along the pathways at incredible speed. You must lure them into cages, where they turn into diamonds.

As if 24 mind-bogglingly difficult screens weren't enough Superior

provides a screen designer too. This is a very classy piece of software which enables you to construct new screens in map form.

These can then be saved as data files and loaded by the main game. You could even challenge your friends to solve your latest devious masterpiece.

The game's graphics aren't the greatest I've ever seen but this minor niggle is soon forgotten as you wrap your mind around the puzzles. Repton 3 is a must for every Electron user.

Collection to collect

Program: Computer Hits 3
Price: £9.95
Supplier: Beau Jolly, 29a Bell Street,
 Reigate, Surrey RH2 7AD.
Tel: 07372 22003

COMPUTER Hits 3 is a compilation consisting of 10 games spread over two cassettes.

Tape one starts with Centibug where a segmented nasty dodges through the mushrooms intent on your destruction, while you and your laser attempt to serve him the same.

This is not one of the better versions of this game although it is fast enough to be a challenge. Graphics are smooth but the sound is unimaginative.

The next offering is Brian Jacks Superstar Challenge where you tackle the man himself in eight different events. Success is not dependent on pure key hammering but on your skill in manipulating the necessary keys.

Sound is almost non-existent but graphics are superb and rate a 9 in their own right. With events ranging from cycling to canoeing and from swimming to squat thrusts it could take some time to master. My only grouse is that events cannot be practiced but must be taken in order.

The third game is Snooker with options for one or two players and a choice of either 10 or 15 red balls.

Danger UXB

Snooker

Graphics are hard to fault and if two people have plenty of time and patience then it's great.

However, the game is slow and the movement of the balls is sometimes unrealistic. It should be noted that the one player option is not against the computer but one player taking all the shots.

I like Felix in the Factory, a ladders and levels game where your aim is to keep the generator topped up with oil despite the attentions of evil gremlins and a conveyor belt full of parcels to scramble over.

Graphics are great, sound is superb – but why such a terrible choice of keys? A for up and Z for down is quite normal but P for left and the up and down cursors for jump and right respectively seems a strange choice.

Tape one ends with Danger UXB where you cross blocks to defuse the bombs. The blocks disappear as you move so watch the route you take or the next bomb is harder to reach. Gain extra points on the way by collecting the flags but avoid the skulls or you will lose a life.

On higher levels you have a reduced time limit to clear the screen, and you are harassed by a pair of animated Doc Marten boots intent on stamping you flat. Sound and graphics are excellent and the game is most addictive. One of my favourites.

Tape two opens with Alien Dropout, an invaders style game with the variation of mutant moths. These settle in boxes at the top of the screen allowing you to shoot them from below and only escape to attack you when a particular box is full.

This might have been addictive once upon a time but it looks very dated nowadays. There are six different skill levels but they do little except speed up the action.

In the second game on this tape, Felix meets the Evil Weevils, our hero travels about his factory using aerosols against the mutating weevils

Jungle Boy

Felix meets the Evil Weevils

and dodging ball bearings rolling down the chutes and conveyors. Excellent sound effects and nice chunky graphics give this game a very high rating.

The game Jungle Boy started life as Tarzan Boy and your task is to negotiate screens to rescue Jane. These screens are so packed with pitfalls and peril that the real Congo must seem tame by comparison.

There are cheetahs, rock dropping gorillas, a relative of Hissing Sid and, as a reminder of the original publishers, there's even a comparatively benign alligator. Colourful, well drawn graphics make this one of the best arcade games around.

In Mineshaft you move through screens of skeletal graphics collecting what are supposed to be lumps of coal while dodging various hazards. I've seen better games in magazine listings.

The last game is Stranded, a graphics adventure which starts with you stranded on a strange planet and looking for a way home. I have had this game in my collection since its original release and for anyone tempted to try a comparatively simple adventure game this is one of the best.

Despite the criticisms there are enough first class games on the two tapes to make this compilation very good value overall.

FOR CONNOISSEURS OF ACTION, LEISURE OR LEARNING

All programs available for BBC B, B+, Master, Compact & Electron

The ANSWER BACK QUIZ Series each
£9.95 cassette
£10.95 5.25" disc
£12.95 3.5" disc

ANSWER BACK - JUNIOR General knowledge for ages 6-11
Combines a wealth of fascinating information on a multitude of topics with a compelling "Princess & Dragon" game for youngsters.

ANSWER BACK - SENIOR General knowledge for ages 12 and over
Space-game fans yearn to learn whilst destroying the aliens! Includes a gigantic general knowledge database of questions and answers.

ANSWER BACK - SPORT Mega-Sports Game for ages 14-adult
Includes machine-code football and tennis games together with a mind-bending collection of sports quizzes.

ALL ANSWER BACK PROGRAMS include simple commands for creating and saving an unlimited number of new multiple choice questions files AND are fully compatible with our new range of accessory files "FACTFILE 500".

The FACTFILE 500 Series each
£4.95 cassette
£5.95 5.25" disc
£8.45 3.5" disc

Each pack contains a massive supplementary database of 500 questions and 2000 multiple choice answers for use with any of the above ANSWER BACK programs. FACTFILE 500 packs are available on an ever increasing range of leisure and educational subjects for youngsters, CSE/O-Level students and adults. FACTFILE 500 subjects include: Arithmetic, Spelling, Sport, Natural History, First Aid, Science, English Words, England, Scotland, and many more. Write or phone for latest subject list and age ranges.

The MODERN LANGUAGE Series each
£8.95 cassette
£9.95 5.25" disc
£19.95 3.5" disc

Easily the most popular and successful Foreign Language Learning programs of all time, for beginners to O-Level/CSE/GCSE. Complete with extensive vocabulary files which may be extended or modified indefinitely by users.

The French Mistress (Level A or Level B) Choose Level A for thousands of nouns;
The German Master (Level A or Level B)
The Spanish Tutor (Level A or Level B)
The Italian Tutor (Level A or Level B) Choose Level B for verbs, adjectives
The Welsh Tutor (Available January) adverbs, phrases etc
*3.5" disc contains both levels A & B

IDENTIFY EUROPE each
£7.95 cassette
£8.95 5.25" disc
£10.95 3.5" disc

Provides a fascinating and competitive way of discovering and learning the geography of Europe. The program will provide countless hours of amusement and all the family is sure to benefit from it. Includes an incredibly detailed map of Europe. Suitable for all ages, 6-Adult.

MORE RAM AND SPEED!

E2P-6502

PMS ADD SECOND PROCESSOR POWER TO THE ELK!

Disappointed by the speed of your Electron?
Would you like an ELK that performs like a Beeb?
Is shortage of RAM getting you down?
Unable to use 80 column display with View?

**IF YOUR ANSWER IS YES -
THEN PMS HAVE THE SOLUTION**

LOOK AT THIS INCREDIBLE SPECIFICATION:

- 300% speed increase in Basic (Mode 0)
- 3.5 times more text in View (Mode 3)
- 30K Basic programs in all modes
- 60K free for machine code
- 'HI' Languages (Basic & View) give at least 44K
- Absolutely no modifications required
- Plugs into Plus 1 slot
- Runs BBC ROM Languages

ONLY £89 INC VAT
+ £2 DELIVERY
**THE ULTIMATE "ADD-ON" FOR THE
ELECTRON**

PMS ANNOUNCE...

WORDWISE PLUS ON THE ELECTRON!

Now, thanks to the power of the E2P Second Processor, Electron users can run the most popular BBC wordprocessor - Computer Concept's WORDWISE PLUS. PMS programmers have re-written the MODE 7, WORDWISE screen handling, and keyboard routines to work on an Electron with E2P.

Not only this, but because a Second Processor is being used, a massive 42K - yes! over 42,000 characters - of text can be handled, with PREVIEW ALWAYS in an 80 column MODE II. Add to this the fact that E2P WORDWISE PLUS is totally disk based, requiring NO ROMS or cartridges.

E2P WORDWISE PLUS is a full implementation of the original WORDWISE PLUS, with all the SEGMENT MENU features maintained. WORDWISE files created on a BBC can be loaded into the Electron and vice versa.

PMS are offering E2P WORDWISE PLUS at an introductory price of **ONLY £39.95 (Inc VAT & delivery).**

E2P WORDWISE PLUS is supplied on 3.5" or 5.25" disk (state size & DFS format, when ordering) together with full WORDWISE documentation. E2P WORDWISE PLUS is available ONLY from PMS. **NOTE: This is a special version of WORDWISE which will NOT run on a BBC or unexpanded Electron.**

PMS overseas dealers: VELOBYTE COMPUTERS, Schiedamsedijk 5A-6A, 3011 EB Rotterdam, Netherlands.

DEALER ENQUIRES WELCOME

Now let's put the turtle to work

MIKE PLUMMER
concludes his
introduction to Pogo

LAST month I presented a turtle graphics compiler, which I hope you've entered by now. This time we'll look at Pogo – the language used – and see how to write simple programs.

Let me first say that it is not Logo, the language usually associated with turtle graphics, but it is very similar.

And it will give you a grounding in some of the structured programming techniques used.

When the compiler is run you'll see a start up message and the turtle – a triangle – in the middle of the screen. Pogo is now in immediate mode waiting for you to enter a command.

The first thing to do is type in a few commands and see their effect. Try:

CLS

There will be a slight delay as the command is compiled and then the compiled code is executed. The screen should clear and the turtle reappear.

The coordinates it uses are exactly the same as those used by Basic's MOVE and DRAW commands.

When the screen is cleared the turtle is moved to the centre of the screen – 640,512 – and its heading is set to 0 degrees – north. Now type:

FORWARD 200

and the turtle should go up the screen, draw a line and stop 200 screen units above where it started and:

RIGHT 90

will turn it through a right angle clockwise. Repeat the:

FORWARD 200

RIGHT 90

three more times and you should end up with a square.

Note that we've entered the same commands four times to draw the square. We can save a lot of typing using REPEAT. Enter:

CLS : REPEAT 4 [FORWARD 200 : RIGHT 90]

all on one line and press Return. You'll see the same square drawn again.

Within the square brackets following the REPEAT are the commands to repeat. The number immediately after REPEAT is the number of times to repeat them.

In our example FORWARD 200, RIGHT 90 will be repeated four times.

Even this can be tedious if you want to draw several squares so we can define a new word to do this:

TO SQUARE

tells Pogo that we're defining a new word called SQUARE and Pogo acknowledges by changing the

input prompt from – to @.

Next type in the actual definition:

```
CLS
REPEAT 4
[
  FORWARD 200 : RIGHT 90
]
```

To end the definition we naturally type:

END

You have now defined a new word which will clear the screen and draw a square, and SQUARE is now part of the Pogo language. To see it in action enter:

SQUARE

Of course this only draws a square with a side of 200 units. What if we want to draw different sizes?

Like Basic procedures Pogo enables parameters to be passed to defined words, so we can tell SQUARE what size square to draw.

Get rid of the old version of SQUARE with:

FORGET SQUARE

and type in the new one:

```
TO SQUARE #side
CLS
REPEAT 4
[
  FORWARD #side : RIGHT 90
]
END
```

This defines a word SQUARE with one parameter *side*. Note that parameter names and variables, as we'll see later, must start with a #.

You can now draw a small square with:

SQUARE 100

or a large one with:

SQUARE 400

Try defining a word to draw a rectangle. I'll start you off with:

TO RECTANGLE #L , #W

where L and W are the length and width. Test it with:

RECTANGLE 500 , 100

Unlike Basic all Pogo vari-

ables are integer and we need to declare them before referring to them.

MAKE is used to set up new variables and they can be used much as they would in Basic.

```
MAKE #number
#number = 100
PRINT #number
```

You can use any function that is available in Basic, although those like SIN and COS are not much use when using integers only.

Let's see how we can use such a variable. Type in the following, all on one line:

```
CLS : WHILE #number<500 (
  SQUARE #number : #number =
  #number + 100 )
```

You should see a series of squares increasing in size. This example also introduces the WHILE/WEND loop.

The commands in square brackets are executed while the condition #number<500 is true.

This could be incor-

porated into a word definition:

```
TO MEGASQUARE
CLS
#number = 100
WHILE #number<500
[
  SQUARE #number
  #number = #number + 100
]
END
```

Now whenever Pogo comes across MEGASQUARE it will clear the screen and draw a set of squares. You can save the compiled code to tape or disc with:

SAVE Temp

which will save it under the name Temp. NEW will remove all of your defined words but they can be reloaded at any time with:

LOAD Temp

By now you should have a pretty good idea of how to

```
/* ----- */
/* Enter PICTURE to run */
/* ----- */

to arc #len
  repeat 10
  (
    forward #len
    right 5
  )
end

to petal
  arc 20
  right 130
  arc 20
end

to flower
  repeat 13
  (
    petal
    right 20
  )
end

to stee
  left 10
  back 400
  gpos 440 , 112
  right 90
  forward 400
end

to leaves
  gpos 640 , 112
  left 80
  arc 35
  right 130
  arc 35
  right 60
  arc 30
  right 130
  arc 30
end

to picture
  hide : cls
  flower : stee : leaves
  gpos 150 , 800
  type "A flower by
  courtesy of POGO"
end
```

Program 1: Picture

WORD	FUNCTION
ACCEPT #var	Input from the keyboard.
CLS	Clear the screen and home turtle.
PRINT #var	Print the variable on a new line.
PRINT 'text'	Print the text on a new line.
TYPE #var	Print at the current position.
TYPE "text"	Print at the current position.
VDU expr	Only one expression allowed.
BACK expr	Move turtle back.
DOWN	Put the pen down.
FORWARD expr	Move turtle forward.
GPOS expr , expr	Move the turtle to expr,expr.
HIDE	Do not draw the turtle.
LEFT expr	Turn the turtle anti-clockwise.
RIGHT expr	Turn the turtle clockwise.
SHOW	Draw the turtle.
UP	Lift the pen up.
?	Print the turtle position and heading.
TO name	Define a new word, optional parameters.
END	End a definition.
MAKE #var	Declare an integer variable.

WORD	FUNCTION
IF expr [words]	IF the expression is TRUE THEN execute all of the words in [].
ELSE [words]	Used with IF. IF expr [words] ELSE [words].
REPEAT expr [words]	Execute the words expr times.
WHILE expr [words]	Execute the words while expr is TRUE.
FORGET word	Remove all words after and including the named word.
LIST	List all defined words and variables.
NEW	Remove all defined words and variables.
SIZE	Print free memory and memory used.
EXEC filename	Take input from an Ascii file.
LOAD filename	Load a program.
SAVE filename	Save all defined words and variables.
SPOOL filename	Spool output to file.
BREAK	Return to immediate mode from any word.
OSCLI "text"	Operating system command.
QUIT	Return to Basic.
/* Text */	Comments, like rem statements.

Table 1: Pogo reserved words - expr means a number, variable or an arithmetic expression, words is a list of words and var is a variable.

From Page 21

write Pogo programs. You'll find a complete list of commands in Table I along with a brief description of each.

These are Pogo's reserved words – that is, the ones provided by Pogo. Of course you can add to this list by defining your own as we've seen.

All input can be in upper or lower case. Pogo will convert everything to upper case except text between quotes.

All commands, whether defined or reserved words, must be separated by colons – except after a list of commands enclosed in square brackets.

Everything, including colons, must be separated by spaces. The only exception to this rule is when entering expressions in conditional or assignment statements.

Even the comment beginning and end markers `/*` and `*/` must be separated from the rest of the comment by spaces. If in doubt put a

space in, it won't do any harm.

So far you have typed in reserved words completely. In fact you only need to type in as much of that word as will identify it. Thus the reserved word BACK can be referred to by B, BA, BAC or BACK.

However, if there is more than one word which begins with the same characters, and if you only type these in, the first reserved word Pogo finds will be used.

I have chosen the order so that the more frequently

used commands come first in the list. Thus the command given by typing in FO will be FORWARD and not FORGET, and E will become ELSE and not EXEC.

On the other hand defined words must always be typed in full. You can edit the input using the usual line editing commands with the Copy and Delete keys.

Once you've hit Return, that is it as far as editing the source code is concerned. If there is an error FORGET it and enter it again.

However, you can edit source code programs using View. To help in this respect you can spool what you type in at the keyboard into a file.

Press Escape to stop spooling. Load the file into View using READ. Alternatively you can create the source code in the first place using View.

Once you have created a source file in this way you can compile it using Pogo's EXEC command.

Good luck with your Pogo programming. If you are in any doubt about how to use a word have a look at the

three Pogo listings accompanying this article – Picture, Pattern and Stargame. These use most if not all Pogo's vocabulary. ■

```
/* ----- */
/* Enter PATTERN number */

ACORN
ELECTRON VERSION
RELEASED 1 January 1986
BBC MICRO VERSION
AVAILABLE NOW!

THE BEST ARCADE ADVENTURE EVER

Citadel!

**ACORN
ELECTRON
BBC
MICRO**

A huge adventure featuring over 100 beautifully detailed screens packed with challenging puzzles and awesome foes. You start in the vast 3-towered citadel with its curious cellar and well. Should you survive the perils within, you can venture on to the witch's house, Stonehenge, the pyramids, and across the desert to the mountains. Cross the ocean and you will reach the mystic temple on the island. You should devise how to use the ice crystal, trampolines, cannonballs, Egyptian statues, etc., to the best advantage in your onerous mission. Cleverly realistic animation (flickering torches, splashing water, and smouldering furnaces), is used throughout to depict your movements and to vividly portray the fearsome monks, mummies and wolves.

COMPETITION — 2 CHANCES TO WIN!

Three crowns have been craftily hidden within the adventure; the first person to locate any two of the three crowns will win **£100**. The maximum score which can be obtained is 99 points; the first person to reach this score will be presented with an impressive personal engraved shield and a cheque for **£200**.

THE ROMBOX PLUS

A replacement for the Plus 1

- *Two cartridge slots
- *Four 8K/16K ROM sockets also selectable as RAM
- *Centronics printer interface
- *Built in print buffer software for sideways RAM

Only £49.95

ROMBOX

- *Maximum 8 ROMs instantly selectable
- *Compatible with BBC ROMs (eg View and Viewsheets) and all Electron ROM based software
- *Fully compatible with PLUS 1, PLUS 3 and other related add-ons
- *Supports 8K and 16K sideways RAM

Still Only £44.95

ROMBOX-P

Offers all the features of the ROMBOX and

- *Centronics printer interface

*FREE Printer ROM

(Retail Price £24.95)

Only £69.95

STARWORD (16K ROM) (BBC/ELECTRON)

*Does everything VIEW does plus MUCH MORE!

Designed for the home user, education or small business needs, STARWORD enables even those with limited typing skills to produce and print letters, manuals, reports or any large document.

- *Very extensive printer control facilities including BOLD, UNDERLINE, and WIDE immediately available.
- *Proper mailmerge with STARSTORE and STARSTORE II for producing standard letters.
- *Internal printer driver for Epson compatible printers.

*Printer Driver Generator ROM available to permit use of most non-Epson compatible printers.

Order P.D.G. at £9.95

*Enhanced version using the clock feature within the CUMANA DISK INTERFACE for day, date and time stamping. "It is certainly the most powerful currently available for the Electron."

Electron User, April 1986

STILL ONLY £34.50

NEW

JOYSTICK INTERFACE

NEW

*Brand new digital joystick interface allowing use of ATARI type 9 pin joysticks on the Electron.

*Plugs simply into ROMBOX PLUS or PLUS 1 cartridge slot.

*Supplied with conversion program (on ROM) to allow compatibility with a large percentage of Electron games.

*Compatible with PLUS 3 and all programs copied using T2P3.

ROMBOX PLUS version

Replacement 8K Eeprom to allow loading of cassette. Software in High resolution Modes. Allows Basic to be called instead of being forced into another language on Switch On or CTRL-BREAK.

Only £7.95

T2P3 T2CU T2P4 ELECTRON TAPE TO DISK COPIERS

A ROM utility for transferring the majority of all protected cassette software, eg. Acornsoft and Micropower to the various Electron disk systems.

Please Order:

T2P3 for the PLUS 3

T2CU for the CUMANA DFS

Still Only £19.95

NEW, for the AP4, T2P4 is now available,

Only £24.95

STARGRAPH (8K ROM)

Graphics Rom giving screen dump to EPSON printer, printing of text at any angle or any size, circle, ellipse polygons, arc, dotted lines, colour filling plus more.

Only £21.95

STARSTORE & STARSTORE II (BBC & ELECTRON)

THE SLOGGER DATABASES

Store and retrieve your names and addresses or any other information with either STARSTORE database ROM.

For cassette users, STARSTORE offers

*255 records with 30 fields per record.

*All standard database functions such as searching, sorting and printing of files.

STARSTORE: Only £21.95

For disk users, the more powerful STARSTORE II provides

*9999 records with 90 fields per record.

*Advanced database functions such as formatted printing to print fields in any position whilst retaining a simple to use menu-driven database.

STARSTORE II: Only £29.95

CUMANA ELECTRON DISK INTERFACE

*Plugs directly into ROMBOX PLUS or PLUS 1

*Has battery backed RAM with PAGE at E00

*Additional sideways ROM socket

Only £69.95

*TREK (16K ROM)

A ROM disassembler with a difference. Ideal for beginners not only to Machine Code but to the Electron itself as this ROM Utility actually COMMENTS as it disassembles, a feature found in no other package.

SPECIAL INTRODUCTORY
PRICE £17.50

16K SIDeways RAM

Has the provision to run Sideways ROMs as well as being selectable as a 16,000 byte print buffer, provided that you have ROMBOX-PLUS or PRINTER ROM.

* COMPLETE WITH RAMS

* WRITE PROTECTED

* NO SOLDERING

* SIMPLY FITS INTO A ROM SLOT ON ANY SLOGGER ROMBOX

* ONLY £29.95

DISK STARTER PACKS

*A combination of disk interface and the following single sided, double density BBC disk drives

With 40 Track drive

£169.95

With 40/80 Track drive

£195.00

S E D F S (ELECTRON)

Slogger Electron Disk Filing System

*A ROM for use in the CUMANA disk interface providing BBC compatibility

*Increased speed with formatting and verifying on ROM

*Retention of the real time clock

*Extensive documentation

Only £19.95

STARMON (8K ROM) MACHINE CODE MONITOR

- *Display of memory in: ASCII and binary, decimal, octal or hexadecimal.
- *Full support of sideways ROMs.
- *Comprehensive debugging facilities, including breakpoints, traces and events.
- *"a very professional piece of firmware" ...Acorn User.

Only £22.50

VINE MICRO'S ADDCOMM (ROM)

*40 Commands

*Graphics, Toolkit and Logic Graphics.

Only £25.00

ELKMAN (8K ROM)

An Electron system manager providing the ability to save and then load ROM images for use in sideways RAM. Gives complete control of all ROMs and interface units present on the system.

Only £17.50

PRINTER ROM (8K) (BBC/ELECTRON)

Allows use of sideways RAM as an 8K or 16K print buffer and offers a host of useful utilities for any printer, such as italics, fonts and underlining

Only £24.95

VINE MICRO'S MATRIX ROM

The Matrix ROM provides a comprehensive range of commands for performing matrix operations (including inversion).

Only £41.40

SLOGGER

SLOGGER'S LATEST PRODUCT THE 'MASTER' RAM BOARD

THE MASSIVE 32K SHADOW RAM GIVES YOU THE FIRST 64K ELECTRON

*Shadow Ram is one of the most powerful features of the BBC Master Series, which puts it in a class of its own. In "Shadow Mode", not only your BASIC programs, but also your STARWORD, STARSTORE, VIEW, VIEWSTORE, VIEWSHEET files or MACHINE CODE programs, in fact virtually all correctly written programs (except most games), can now be as large as 28,000 BYTES IN ANY SCREEN MODE.

This means that your VIEW or STARWORD files can be more than twice as large (three times as large if you are working in 80 column mode).

If this is not enough, you also get a speed increase similar to the Turbo Driver.

It is common knowledge that games will not run with either Shadow RAM or Second Processors, for this reason, Slogger have designed in a "TURBO mode" so that games players can also reap the full benefit of this "Multi-function" unit

A three position switch allows the user to quickly change between NORMAL, SHADOW and TURBO modes.

The screen uses a maximum of 20K which leaves 12,000 bytes free, Slogger has taken this into account in its operating system (fitted to the board) so that it can be used as 12K printer buffer for instance.

The Master RAM Board is FULLY COMPATIBLE WITH ALL CURRENT ELECTRON ADD-ONS except the Turbo-Driver (both units fit into the 6502 Microprocessor socket).

The Master RAM Board is available in two forms.

1 Kit Form... a fully built board including components (except 6502 Microprocessor) and switch.

Order MR2 for only £54.95

2 Installation service... send your Electron to us and it will be upgraded to 64K and returned to you within seven days of receipt by SLOGGER, Fitted, tested including carriage PLUS ONE YEARS FULL WARRANTY.

Order MR1 for only £64.95

ELK TURBO-DRIVER

(DESIGNED BY ANDYK LTD.)

INCREASES THE SPEED OF YOUR
ELECTRON COMPARABLE TO THE BBC

- ★★ UP TO 100% IMPROVEMENT IN SPEED ★★
- ★★ ABLE TO RUN BBC SOFTWARE (Non Mode 7)★★
- ★★ WHERE SPEED WAS THE LIMITING FACTOR ★★
(Such as Acornsoft's Aviator Flight Simulator)
- ★★ MAKES ELECTRON SOFTWARE RUN FASTER★★
- CAN BE SWITCHED BETWEEN NORMAL &
"TURBO DRIVE"
- ★★ OPERATES IN ALL ELECTRON MODES★★
- ★★ NO SOFTWARE MODIFICATION REQD.★★
- ★★ COMPATIBLE WITH ALL ADD-ONS ★★
- ★★ (Plus 1, Plus 3, Rombox, Adapter Boards, etc)★★

All inclusive ONLY £42.00 (VAT Included)

Fitted, Tested, Including switch and carriage.

PLEASE QUOTE T-D1 ON ORDER FORM

The Upgrade 'TURBO DRIVER' K it available
(including switch)

PLEASE QUOTE ON FORM F-D2

£29.95 Inc P&P

The guaranteed seven day installation service
SLOGGER is providing a unique service with guarantees
to return your Electron with the 'TURBO-DRIVER' or
'MASTER' RAM BOARD, installed WITHIN
SEVEN DAYS OF ITS RECEIPT!!!

Simply enclose your order with your Electron (in its
original packing if possible) and send it to our Gillingham
address

HAVE you ever envied BBC Micro owners because they have Mode 7? Some of you may have already bought a Mode 7 adaptor – but for those of you who haven't, and at no cost to you, *Electron User* presents its own software version.

Before I continue I must stress that any BBC Micro programs you have which do not work on the Electron still won't work using this simulator.

However, those that do and make use of Mode 7 will be improved by the addition of proper Mode 7 double height characters and graphics.

To show how powerful this simulator is Figure 1 is a dump of a Mode 7 teletext screen display created on a BBC Micro, saved to disc and loaded into an Electron.

Program 1 shows the

```
10 REM Program 1
20 MODE 7
30 INPUT "Filename:"scr$
40 CLS
50 FI=OPENIN scr$
60 FOR I2=1 TO 25*48-1
70 CI=BBET CF1
80 PRINT CHR$(CI);
90 NEXT
100 CLOSE FI
110 GOTO 110
```

Program 1

Figure 1: A Mode 7 teletext screen display

Go Mode 7 the software way

ROBIN NIXON shows how it's done with the aid of this powerful simulator

routine used to load and display this and can be used for any saved Mode 7 screen.

An even tougher test would be to try and run a program that uses Mode 7.

Alien Invasion – published in the February 1984 issue of *The Micro User* – is the classic arcade game Space Invaders, written entirely in Mode 7 using teletext graphics.

The game runs on the Electron and produces quite a reasonable display. Figure 11 shows a dump of the game taken from an Electron.

The game does use illegal

methods to move the bombs – it tries to poke the Mode 7 screen directly – and this of course fails.

Please note that programs must use legal methods to create the display or the simulator will not work.

Mode 7 is completely different from the other seven modes and the programming techniques used are rather special.

I haven't the space here to fully explain all the teletext control codes – try and borrow a friend's manual for his BBC Micro – but here's a taster.

Double height text is produced by preceding the

string with CHR\$(141) and printing it twice like:

```
PRINT CHR$(141);"Hello"
PRINT CHR$(141);"Hello"
```

Lowercase characters can be replaced with graphics by preceding the string with CHR\$(145):

```
PRINT CHR$(145);"abcde"
```

You can still print uppercase characters though.

Try experimenting and have a look at the listings in *The Micro User* as the games often have Mode 7 title screens.

The simulator is quite

Figure 11: Alien Invasion – Mode 7 Space Invaders

complex and again I haven't the space explain in detail how the program works.

Briefly though, the simulator works by interrupting the Electron when it changes mode.

If the new mode selected is 7 then the program will select Mode 4 and handle all output directed to the screen. Of course you can still use Mode 4 in the normal way.

The lower 25 lines of the Mode 4 screen become the new Mode 7 display. The top few lines are used as workspace and a dummy Mode 7 screen is stored here.

When characters are output to the screen they are stored in the dummy.

The program then looks at the dummy to see if there are any control codes to be taken into account before sending the characters to the new Mode 7 display.

The program could have been designed to use Mode 2 allowing all eight Mode 7 colours to be displayed.

However, this would involve totally redesigning the character set and would take up too much memory.

Many Mode 7 programs are quite long and simply wouldn't fit in the space left, particularly if you have a Plus 3.

So, although all text and graphics are printed correctly unfortunately they are only monochrome.

Enter and save the simulator. Before you run it PAGE must be greater than &1300 as the machine code is stored between &E00 and &1300.

Change PAGE and reload the program if necessary.

Plus 3 users will find that they can't use discs after running the program. If this is essential alter P% in line 170 so that the code is assembled to a different address.

Now you can create impressive teletext displays with ease. Have fun with your new Mode 7. ■

Mode 7 listing

THOUGHTWARE

Sports simulations

SORRY WE'RE LATE, BUT WE THINK YOU'LL FIND IT WORTH THE WAIT

Way back in 1983 we introduced LEAGUE DIVISION 1 for the BBC Micro. In September 1984 the original version of SOCCER SUPREMO, an Electron Version of this game, was introduced. In both games you become the manager of a newly promoted 1st division team, which you have to build up into a challenger, and hopefully winner, of the 1st Division Championship. The game uses professional simulation techniques which produce a true, natural management simulation rather than the simple minded mental arithmetic exercises of other "simulations". This caused this response:

"Hugely enjoyable but dangerously addictive" says Dr. Trevor Harley, Department
of Psychology, University of Warwick

(He's bought four of our soccer management games)

WELL DR HARLEY

YOU AIN'T SEEN NOTHING YET!!

THE NEW

SOCCER SUPREMO

A SOCCER MANAGEMENT SIMULATION

TAPE 1
6 Seasons
League Division 1
The F.A. Cup

TAPE 2
European Cup
U.E.F.A. Cup
Cup Winners Cup

To the original version of SOCCER SUPREMO we've added; the F.A. Cup, the European Cup, the U.E.F.A. Cup and the European Cup Winners Cup. We've introduced multiple DATA files for the different seasons and to allow a massive transfer market of over seventy players, from World Cup stars to top scoring non-league players, we've retained the 3D, 22 man, 90 minute football match graphics, improving the graphics' layout. We've added sound, in-match injuries, named goal scorers, penalty shoot-outs (European matches), and replaced the complicated match statistics with a post match individual player assessment. We've well, lots of other small improvements.

The game is now almost three times the size of the original, using two tapes plus the multiple datafiles. But

But we've added nothing to the cost

The new SOCCER SUPREMO is supplied DIRECT from Qual-Soft on a same day basis. TAPE 1 + TAPE 2 + MANUAL, P&P and VAT still costs £9.95. Current owners of the original SOCCER SUPREMO can obtain a £5.00 rebate by returning their tape with their order. Just include payment for £4.95

TITION.. COMPETITION.. COMPE

2 ways for you to Win

Advanced Computer Products, a major hardware and software producer, has generously provided over £500 worth of prizes for readers of Electron User - with two great competitions in one!

WIN

1st prize: AP4 interface plus a 40/80 switchable double-sided Cumana disc drive

2nd prize: Advanced Disc Toolkit and sideways ram

3rd prize: Advanced rom manager and Advanced rom Adapter I.

Just answer the following five questions:

- 1 How much memory is left after plugging in the AP4 (more, the same, or less)?
- 2 What are the three interfaces in the AP5?
- 3 How many screen modes does the Acorn Electron have?
- 4 How many buttons are there on the AMX mouse?
- 5 What does the abbreviation WIMP stand for?

WIN

1st prize: AP5 interface plus AMX mouse package

2nd prize: Advanced 1770 DFS and Advanced rom Adapter II

3rd prize: Advanced rom Manager and Advanced rom Adapter I

Come up with a practical suggestion for a new product that ACP could add to its range. It can be either hardware, software, or both. Write up to 100 words describing your idea - use a diagram if you feel it necessary. You may use an additional sheet of paper for your suggestion.

RULES

- Cut out or photocopy the entry form, fill in all the details and send to the address below to arrive no later than January 31, 1987.
- You can enter one or both competitions at the same time. Winning one competition does not make your entry void for the other.
- The judges' decision is final. The results will appear in the April issue of Electron User.

NB: You will need a Plus 1 interface to use most of these prizes.

Answers

- 1 _____
- 2 _____
- 3 _____
- 4 _____
- 5 _____

My suggestion for a new product is: _____

Name _____

Address _____

Postcode _____ Age _____

Send to: ACP Competition, Electron User, Europa House, 66 Chester Road, Hazel Grove, Stockport SK7 5NY.

BACK TO BASICS

Part five of
TREVOR ROBERTS
down-to-earth series

A number of facts about strings

BY now you should have no trouble with string variables such as:

```
LET letter$="a"
```

and:

```
LET name$="Bodger"
```

It should be easy to see how they differ from the numeric variables we can create with assignments such as:

```
LET number=23
```

or:

```
LET total=100
```

It takes a little more insight to see that:

```
LET number$="123"
```

creates a string variable even though the string itself is made up of numbers. In fact when the numbers are put in a string like this they stop being treated as numbers by the Electron and are just dealt with as characters like a or f or &.

In that case you might ask why bother, but as you get further into the world of programming you'll see that putting figures into strings and the reverse are important techniques.

Sum more facts about strings

LET'S stick to putting numbers in string variables with:

```
LET aNumber$="5"
```

```
LET anotherNumber$="10"
```

Now it should come as no surprise that after this:

```
PRINT aNumber$
```

```
PRINT anotherNumber$
```

results in 5 and 10 appearing. However don't be fooled, they're not numeric variables, they're strings as the dollar sign - \$ - at the end of the variable names tells you. So you can't do maths with them, though no doubt you'll try it many times during your programming career!

If you don't believe me try:

```
PRINT aNumber$+anotherNumber$
```

If you thought that you'd get 50 (5*10) then think again. As the:

Type mismatch

message points out, you've made a mistake. You're trying to get strings to do something that they can't do. Stick to numerics for your sums and you'll be all right.

Test out your understanding of the difference between string and numeric variables by trying to explain what happens when you enter the following commands:

```
LET one$="1"
LET two$="2"
PRINT one$+two$
LET one=1
LET two=2
PRINT one*two
```

Con + cat + e + nation

HAVING said that you can't do sums with strings, you can do something very like it. Set up a couple of string variables with:

```
LET one$="1"  
LET two$="2"
```

and see what happens when you try subtraction with:

```
PRINT one$-two$
```

or division using:

```
PRINT one$/two$
```

As you might expect, the Electron doesn't like it. However, when you use:

```
PRINT one$+two$
```

you do get a result, 12. But although we've used a plus sign, it's fairly obvious that the two strings haven't been added. After all 1+2 is 3, not 12.

What's happened is that the strings have been joined together or concatenated.

While we won't do more than introduce it here, concatenation comes into its own as you deal with the more advanced part of programming known as string handling. For now just content yourself with seeing that:

```
PRINT one$+two$
```

has a very different result from:

```
PRINT two$+one$
```

Getting the message

WE can use string variables to save us an awful lot of typing. Suppose, for reasons best known to ourselves, we decided to have our Electron give us three cheers. We could do this with the simple program:

```
10 PRINT "Hip hip hooray"  
20 PRINT "Hip hip hooray"  
30 PRINT "Hip hip hooray"
```

If you've typed it in and are wondering why nothing is happening, remember that the program lurks in memory waiting for a RUN to bring it to life. Once you've given this word of power our micro obliges with the cheers.

As you typed the program in, it may have occurred to you that most of it is exactly the same. And you might have wondered if you could save yourself a bit of work. Go to the top of the class if you came up with a program like:

```
10 hip$="Hip hip hooray"  
20 PRINT hip$  
30 PRINT hip$  
40 PRINT hip$
```

By using a string variable to hold a long string we can save ourselves a lot of typing. And that will come in handy as we explore how programs work next month.

More strings attached

ONE nice use of concatenation is to join two strings together to form a more meaningful third string. Suppose you'd created two strings with:

```
firstname$="Trevor"  
surname$="Roberts"
```

You could then create my full name with:

```
fullname$=firstname$+surname$
```

There's one problem with this, as you'll see if you try to display `fullname$` using:

```
PRINT fullname$
```

You get:

```
TrevorRoberts
```

— that is, my name without a space between. This can be remedied by including a space after the final letter of Trevor or before the first character of Roberts. Or, since we've just learnt about concatenation, we could use:

```
fullname$=firstname$+" "+surname$  
or even:
```

```
space$=" "  
fullname$=firstname$+space$+surname$
```

While you've been marvelling over the joys of concatenation, have you noticed something? We've stopped using LETs in our assignments. Some Basics won't allow this but the Electron has enough sense to figure out what's happening without a LET. So from now on you're let off LET.

Painting by numbers

Part eleven of the Electron graphics series by TREVOR ROBERTS

CASTING your mind back to last month you'll remember – I hope! – that we looked into the origin of the axes, the part of the screen that the Electron takes as 0,0.

Until then this had always been the bottom left corner of the screen but it was too simple to stay like that for long.

Undeterred by complexity we learnt how to move the graphics origin around the screen using VDU 29.

This takes the form:

```
VDU 29,xorigin;yorigin;
```

where *xorigin* and *yorigin* are the coordinates of the point we wish to be the new centre of the screen.

Using this we saw that the punctuation was vital – confuse a semicolon with a comma at your peril!

And we also came across negative coordinates for our DRAW and MOVE commands. Figure 1 should refresh your memory.

Once that's been done,

Program 1 should cause you no problems. It just draws a series of vertical bars up the screen.

But how does the program do it? Not by using DRAW and MOVE with different coordinates, that would be too easy. Fiendishly, it uses VDU 29.

Line 20 puts the Electron into Mode 5, the four colour

graphics mode that we've used for most of our programs.

Then the program enters a FOR...NEXT loop. The body of the loop is made up of a solitary VDU 29, a MOVE to the origin (0,0) and a DRAW which paints a line from 0,0 to 0,100.

Nothing remarkable about that, you might think.

The cunning bit lies in the fact that each time round the loop, the origin is moved by the VDU 29 command of line 40.

And as this takes the form:

```
VDU 29,loop;loop;
```

and *loop* increases by 100 each time round, so the origin creeps up the screen

from left to right.

At first it sits at 0,0 but the second time round the loop *loop* has the value 100 and so the VDU 29 of line 40 has an effective value of:

```
VDU 29,100;100;
```

The following MOVE and DRAW now take this point as the origin for the new line.

As the loop cycles, *loop* increases in value, the origin moves up the screen and with it the position of the line that's drawn.

There's one point about the program that you might have missed – I did and I wrote it!

Notice that the VDU 29 always works with the bottom left corner taken as 0,0.

In other words the VDU 29

```
10 REM Program 1
20 MODE 5
30 FOR loop=0 TO 1000 ST
EP 100
40 VDU 29,loop;loop;
50 MOVE 0,0
60 DRAW 0,100
70 NEXT loop
```

Program 1

```
10 REM Program 11
20 MODE 5
30 VDU 5
40 FOR loop=0 TO 1000 ST
EP 100
50 VDU 29,loop;loop;
60 MOVE 0,0
70 PRINT "HI!"
80 NEXT loop
90 VDU 4
```

Program 11

command ignores any new origin that might have been created by a previous VDU 29.

If this wasn't the case successive lines would be

Figure 1: The effect on the screen coordinates of VDU 29, 640, 512:

drawn with progressively larger gaps between them.

Program II uses the same method but it now has VDU 5 linking the text and graphics cursors. Once this is done, the wandering origin technique is used to send a series of greetings up the screen.

If you cast your mind back to our "Hello" program of last October you'll see that this might be a better way of doing it.

Once you've got over the glories of all that, have a look at Program III which takes most of what we've done so far and uses it to create a pattern or mandala.

I won't go into it in detail but leave it to you to figure out. There's nothing strange about the graphics commands used though you might need a pencil and paper to work out exactly what PROCtwoSides does.

Once you've cracked that you should be able to see how PROCsquare is called four times to make up PROCfourSquare which is itself called four times to make up PROCfourSquare.

And once you've got Program III up and running you can indulge in that great pastime, mucking about.

It's amazing how much you can learn by simply messing around with a program (making sure that you've got a copy of the original safely saved to tape or disc).

Why not add a touch of recursion with the following:

```
25 time=0
95 time=time+1:GCOL 0,time:
IF time<3 THEN PROCfourSquare(
length/2,gap/2,beginx/2,
beginy/2)
```

As well as being more colourful, you get a 3D effect.

If you want more colours why not add:

```
255 GCOL 0,loop MOD 4
```

to the original program or even:

```
20 MODE 2
255 GCOL 0,loop MOD 8
```

for a more colourful pattern.

And if you want to see something odd try:

```
20 MODE 2
255 GCOL 0,loop MOD 8 + 8
```

The mandala seems to pulse, doesn't it? Why?

And, as a final touch, why not have mandalas inside a mandala with:

```
35 PROCfourSquare(90,10,836,704)
36 PROCfourSquare(90,10,436,704)
37 PROCfourSquare(90,10,436,304)
38 PROCfourSquare(90,10,836,304)
```

What about creating a graphics window for the mandala and a text window for appropriate titles? You could even use VDU 5 to label the patterns.

● By the time you've finished playing around with the program you should thoroughly understand the graphics commands we've covered so far. More next month.

```
10 REM Program III
20 MODE 1
30 PROCfourSquare(400,20,640,512)
40 END
50 DEF PROCfourSquare(length,gap,beginx,beginy)
60 PROCsquare(length,gap,beginx,beginy)
70 PROCsquare(length,gap,beginx,beginy-length)
80 PROCsquare(length,gap,beginx-length,beginy-length)
90 PROCsquare(length,gap,beginx-length,beginy)
100 ENDPROC
110 DEF PROCsquare(length,gap,cornerx,cornery)
120 PROCtwoSides(length,gap,cornerx,cornery,1,-1)
130 PROCtwoSides(length,gap,cornerx+length,cornery,-1,-1)
140 PROCtwoSides(length,gap,cornerx+length,cornery+length,-1,1)
150 PROCtwoSides(length,gap,cornerx,cornery+length,1,1)
160 ENDPROC
170 DEF PROCtwoSides(length,gap,startx,starty,signx,signy)
180 LOCAL x1,y1,x2,y2,repeats
190 repeats=INT(length/gap)+1
200 x1=startx
210 y1=starty-signy*length
220 x2=startx
230 y2=starty
240 FOR loop=1 TO repeats
250 MOVE x2,y2
260 DRAW x1,y1
270 x2=x2+signx*gap
280 y1=y1+signy*gap
290 NEXT
300 ENDPROC
```

Program III

Undeterred by complexity we learn how to move the graphics origin around the screen . . .

IF you followed last month's session with the Smileys you should have a listing which matches Program I identically.

We can now progress further and make the game a little more interesting.

We need to put in the numbers 0-9 for the X and Y coordinates, over the columns and down the right hand side. We do this with two FOR...NEXT loops that use the variables *numx* and *numy* to position the numbers, and print them by subtracting 4 and 7 from them respectively, to create the digits 0-9. The reason I avoided the number 10 here is because it has two digits and would have made the screen untidy.

By the way you can't use PROCwindow because the parameter you wish to print is a numeric variable rather than a string, and you would generate an "arguments" error.

Lines 430 and 440 use PROCwindow to print an x and y along the horizontal and vertical axes.

To complete DEFPROC-grid therefore, you need to add lines 410-450.

```
410 FOR numx=4 TO 13:COLOUR 3:PRINTTAB(numx,5);numx-4:NEXT numx
420 FOR numy=7 TO 16:PRINTTAB(15,numy);numy-7:NEXT numy
430 PROCwindow(2,2,9,3,"x")
440 PROCwindow(2,2,17,12,"y")
450 PROCdelay(2)
```

Listing II

```
10 REM Al's Smiley Hunt
20 MODE 5
30 PROCinit
40 PROCtitle
50 PROCgrid
55 GOTO 55
60 PROCsmileys
70 REPEAT
80 PROCinput
90 PROCcheck
100 UNTIL smileys>9
110 PROCfinished
120 PROCresults
130 REM*****
140 DEFPROCinit
150 DIM box(9,9)
160 VDU23;8202;0;0;0;
170 VDU23,224,0,126,126,126,126,126,0
180 VDU23,225,126,255,153,255,169,195,255,126
185 ENVELOPE 1,1,50,-50,0,1,1,0,126,0,0,-126,126,126
190 ENDPROC
200 REM*****
210 DEFPROCwindow(W,col,w,x,wy,A$)
220 COLOUR col
230 IF W=1 THEN VDU20,0,4,19,0
```

Listing I

Making more of Smileys

ALAN McLACHLAN offers more ground rules for game writers

Run the program as you have it now and you should see on the screen, in addition to 100 yellow boxes, the numbers 0 to 9 running across the top of the columns, and also down the right-hand side, with a small x and y showing the axes, as in Figure 1.

If your screen differs in any way, check your typing for errors, including all punctuation marks, and most important the semi-colons in lines 410 and 420.

We are now ready to put in the hidden happy smilers. Line 60 calls DEFPROC-smileys starting at line 470 which uses the random number generator to hide 10 Smileys within our array *box()*.

A FOR...NEXT loop first of all places random numbers in the coordinates *smileyx* and *smileyx*. Then using line 520 we place 1s in those elements in our array. Line 510 checks to see whether any selected element already has a 1 in it, and if so, sends the program back until an array element is encountered with a 0.

You can check whether

```
470 REM*****
480 DEFPROCsmileys
490 FOR tally=1 TO 10
500 smileyx=RND(9);smileyx=RND(9)
510 IF box(smileyx,smileyx)=1 THEN GOTO 500
520 box(smileyx,smileyx)=1
530 NEXT tally
540 ENDPROC
```

Listing III

your Smiley generator has worked by first of all removing line 55 and replacing it with "dummy" line 65.

65 GOTO 65

Now type in line 525, which is a temporary line and will be removed later.

```
525 PROCwindow(2,1,smileyx+4,smileyx+7,"+")
```

If you run the program you should find 10 red asterisks in the grid boxes showing the locations of the "hidden" Smileys. You can leave this line in for a while as it will be useful later for testing purposes.

OK, we've drawn the grid,

initialised it, and hidden the Smileys. We are now ready for the input routine.

Remove line 65 and type in the next procedure.

```
550 REM*****
560 DEFPROCinput
570 PROCwindow(1,0,0,0,"");COLOUR129:CLS
580 PROCwindow(1,0,2,1,"guess number:");PRINTTAB(15,1);turns;PRINTCHR$(7)
590 PROCdelay(1)
600 PROCwindow(1,3,2,3,"Input x,y -")
610 REPEAT:guessx=GET-48:UNTIL guessx>=0 AND guessx<=9
620 PRINTTAB(14,3);guessx;" ";
630 REPEAT:guessy=GET-48:UNTIL guessy>=0 AND guessy<=9
640 PRINTTAB(16,3);guessy;" ";
650 turns=turns+1
660 ENDPROC
```

Listing IV

This deals solely with your input to the computer. It prints two lines of text

```
240 IF W=2 THEN VDU20,0,3,1,19,5
250 PRINTTAB(wx,wy);A$
260 ENDPROC
270 REM*****
280 DEFPROCtitle
290 PROCwindow(1,0,0,0,"");COLOUR129:CLS
300 turns=1;smileys=0
310 PROCwindow(1,3,2,2,"Al's Smiley Hunt")
320 PROCdelay(2)
330 ENDPROC
340 REM*****
350 DEFPROCgrid
360 PROCwindow(2,0,0,0,"");COLOUR128:CLS
370 FOR boxx=4 TO 13:FOR boxy=7 TO 16
380 PROCwindow(2,2,boxx,boxy,CHR$(224))
390 box(boxx-4,boxy-7)=0
400 NEXT boxy:NEXT boxx
410 ENDPROC
420 REM*****
430 DEFPROCdelay(number)
440 FOR delay=1 TO (number+1000)
450 NEXT delay
460 ENDPROC
```

using PROCwindow at lines 580 and 600, then uses the GET command to await your input. Lines 610 to 640 first of all validate your input, only accepting numbers between 0 and 9 and then having assigned the resultant number to variables *guessx* and *guessy* prints them out with a comma already between.

Line 650 simply adds 1 to the variable *turns* to keep tabs on how many attempts you've had. We'll use this later to print out a result.

Unfortunately you can't really check whether this routine is working correctly at this stage without a routine to process the information that you are inputting. Therefore, let's continue by typing in the next two procedures DEFPROCcheck and DEFPROCright.

```

670 REM*****
680 DEFPROCcheck
690 COLOUR128
700 IF box(guessx,guessy)=2 THEN PROCwindow(2,3,0,20,"You've had that one");PROCdelay(2);PRINTTAB(0,20);SPC(20);ENDPROC
710 flagx=0;flagy=0
720 IF box(guessx,guessy)=1 THEN PROCright ELSE PROCwindow(2,0,guessx+4,guessy+7,""):FOR snd=50 TO 0 STEP -5: SOUND 1,1,snd,1:NEXT snd
730 FOR column=0 TO 9:IF box(column,guessy)=1 THEN flagy=1
740 NEXT column
750 FOR row=0 TO 9:IF box(guessx,row)=1 THEN flagx=1
760 NEXT row
770 IF flagx=1 AND flagy=0 THEN PROCwindow(2,1,0,20,"Right column")
780 IF flagy=1 AND flagx=0 THEN PROCwindow(2,1,0,20,"Right row")
790 IF flagx=1 AND flagy=1 THEN PROCwindow(2,1,0,20,"Right column & row")
800 PROCdelay(3);PRINTTAB(0,20);SPC(20)
810 ENDPROC

```

Listing V

```

900 REM*****
910 DEFPROCright
920 PROCwindow(2,1,guessx+4,guessy+7,CHR$(225));FOR snd=0 TO 255 STEP2:SOUND 1,-15,snd,0:NEXT smileys=smileys+1;box(guessx,guessy)=2;ENDPROC

```

Listing VI

The first DEFPROCcheck scans our input to see whether we have found a Smiley or not and line 720 does quite a lot here. It starts by checking to see if there is a 1 in the array element chosen.

If we have a bullseye, we go immediately to DEFPROCright at line 900 where a Smiley face, CHR\$(224) is printed at the location, and a suitably triumphant noise is generated.

Then *smileys* is incremented by one, and finally a 2 is placed in the array element to show that this particular location has been used. Line 700 checks for this number 2 and displays a message to that effect.

Should we fail to find a Smiley, a blank space is printed at the location and the line and column of that guess are checked to see if either contains a Smiley, in order to facilitate clues.

The clues are selected by setting *flagx* or *flagy* to 1 according to whether a column, or row, or both actually hold an undiscovered Smiley. These clues are intended to remove the guesswork, and from their content you should be able to plan your next choice.

We can now check that the game is running correctly so far. Enter line 105.

105 STOP

Now you can test out your input and detection routines by running the program again. Once the Smiley target figure in line 100 is reached, the program stops with a Break at line 105.

The Smiley Hunt

When you are happy that everything is working all right, remove line 105 and type in the next procedure DEFPROCfinished.

```

930 REM*****
940 DEFPROCfinished
950 PROCwindow(1,0,0,0,"");COLOUR129;CLS
960 PROCdelay(3);PROCwindow(1,2,2,2,"That's the lot!");PROCdelay(3)
970 ENDPROC

```

Listing VII

This detects the last Smiley and prints a message on the screen to that effect.

The final procedure DEFPROCresults is entered via line 120.

```

820 REM*****
830 DEFPROCresults
840 PROCwindow(2,3,0,0,"");COLOUR128;CLS
850 PRINTTAB(0,9);"That took "turns;" guesses"
860 PRINTTAB(0,12);"Try again Y/N ?"
870 REPEAT:A=GET AND &DF;UNTIL A=89 OR A=78
880 IF A=89 THEN CLS;PROCdelay(2);GOTO 40 ELSE END
890 ENDPROC

```

Listing VIII

This prints out the end result of your efforts. It simply takes the variable *turns* and prints it as part of

a message. It then prompts to see if you wish to play another scintillating game. Once more it uses the GET command to await your key press. Note also how I've ANDed the resultant key press with &DF to catch both upper and lower case entries of Y or N.

A positive response takes you back to line 40 carefully avoiding the arrays which must not be re-DIMmed, as mentioned last month.

A negative response throws you unceremoniously out of the program, and quite rightly, too. It's not every day you get the chance to play something as exciting as Smiley Hunt. You know, I think I'll translate it for the Plectrum, it might make me a mint.

If having played the game a few times you are happy that it is working correctly, you can remove line 525. You'll find it's a different game altogether now.

It may not be the most sparkling program in the world, but it does contain some interesting techniques. For example, the input routines could be used in any program – they probably already have – and the checking routines could always prove useful. The important thing to me, though, is that you should have been able to follow it through line by line, procedure by procedure, and see how it was put together.

I'm going to stick my neck out now and say that it's absolutely bug-free, but I'm always prepared to be contradicted. After all, learning to de-bug programs is all part of the game, and I might have been crafty enough to have slipped one in for you to find. ■

Figure 1:

Space Zap

ZAP the alien ships before they land or it's curtains for the human race! There may be only one alien intruder in this simple game by John Graley but there are 50 levels of difficulty ranging from super slow to furiously fast to make it a challenging shoot 'em up. Use Z to move left, X to move right and N to fire.

CAN you navigate through the asteroid belt? Neil Hoggarth's fast arcade game has full instructions and a high score table all crammed into 10 lines of Basic - amazing!

YOU can go for gold ...with the **MICRO OLYMPICS**

This is the package that broke all records! More than a game — it's a brilliantly written collection of ELEVEN great track and field events!

Ever imagined yourself as another Seb Coe? Then try to run against the world record holder at 1500 metres. And if that distance is too much for you then there's always the 100, 200, 400 and 800 metres to have a go at.

Not much good at running? Don't worry, MICRO OLYMPICS has many more challenges for you. Why not try your skill at the high jump or the long jump?

And if you can't beat the computer at running or jumping then you can always throw things around in frustration! The trouble is that it's just as hard to be a champion at the discus, the hammer or the javelin.

And the pole vault takes the event to new heights!

Yes, it's fast, furious fun, pitting yourself against the world's best times and distances on your micro.

You may not be another Steve Ovett or Alan Wells, but with practice you **COULD** become the Micro Olympics Champion!

**Play Micro Olympics
— and let your fingers
do the running!**

ALREADY A NUMBER 1 BEST SELLER

COMPATIBLE
WITH THE BBC
B, B+ AND
MASTER
SERIES

The first mission — destroy the reactor for a bonus score.

Retrieve the Pod and make your escape.

Collect the fuel and steer clear of the limpet guns.

Shoot the activator to open the sliding entrance door.

REVIEWS OF THRUST ALREADY PUBLISHED

Zzap! 64: "The most enjoyable game we've played for ages..."

— A ZZAPI SIZZLER.

Computer & Video Games: "Thrust is a simple but totally addictive game..." — A C+VG HIT!

Now available for the BBC Micro and Electron

The Commodore-64 version of Thrust (published by Firebird Software) shot immediately to No.1 in the software charts and was greeted with rave reviews throughout the computer press. Equally addictive and just as enjoyable, the BBC Micro and Electron versions of the game are set to emulate this performance.

Thrust is simple, fun-to-play, yet totally realistic and intensely challenging. Your mission is to visit 24 planets in turn collecting the Klystron Pods and, if possible, destroying each planet's reactor system. Your spaceship and the pods, which are heavier than the spaceship, move authentically subject to the laws of gravity, inertia and momentum — indeed the game's author, Jeremy Smith holds a First-Class Honours degree in Physics! Careful planning of your manoeuvres is essential in order to prevent the pods swinging out of control and dragging your spaceship to destruction.

To add to the challenge, the planets have different gravity rates and, as you progress through the game, some have "reverse gravity" or "invisible landscapes". They are defended by automatic limpet guns strategically placed to protect the pods and fuel tanks — the only source of replenishment for your limited fuel supply. The smooth screen-scrolling, which is exemplary, and the realistic action gives the player a fascinating feeling of floating through space.

PRICE: £7.95 (cassette), \$11.95 (BBC disc)

COMPETITION COMPETITION COMPETITION COMPETITION

If you complete the mission by collecting the pods from all 24 planets, you can enter our competition. The prizes include the beautiful trophy (pictured on the right), £250 cash, and 3 copies of the captivating book "The New Atlas of the Universe" by Patrick Moore. Closing date: 31st January, 1987.

IT'S the year 2065 and Earth is in the midst of an inter-planetary war. Negotiations with Alpha Centuri have broken down and they have threatened to reduce our planet to dust.

However, to prevent unnecessary destruction each planet has agreed to choose a supreme warrior. These will battle to the death on a massive energy grid constructed between the galaxies – the champion gains complete domination over the opposing planet.

You have been chosen to represent Earth and the fate of the planet lies in your hands. To lose will mean slavery for the whole human race.

The battleships start on opposing sides of the energy grid and can move forwards, backwards, left and right but not diagonally and they can't leave the grid. The powerful hyper-space drives leave an ion trail in the craft's wake which must be avoided at all costs.

To destroy your opponent you must either force him off the grid or into your or his own ion trail.

Unfortunately Alpha Centuri have cheated and have sent a whole tribe of warriors. You must defeat them all – the whole population of Earth is counting on you.

Your Electron controls the Alpha Centurian grid warrior and there are ten levels of difficulty. You'll need to keep your wits about you if you are to survive in this challenging arcade game.

JOYSTICKS— THE COMPLETE SOLUTION

DELTA 3B SINGLE—BBC B or ELECTRON PLUS 1 £12.00

A single joystick that in some ways can act as two. The custom made special "low noise" potentiometers are wired so that it will work as a left hand or right hand joystick. It can even run some programs written for two joysticks and has the fire buttons of both.

DELTA 3B TWIN—BBC B or ELECTRON PLUS 1 £19.95

A direct but improved alternative for the original ACORN joysticks, with 2 joysticks wired to one plug. As with all our joysticks they have the fast action sprung to centre return of the steel shafted nylon covered joystick. The light action makes them ideal to hold and the 3 fire buttons allow left or right-handed use.

Fixed Odds Forecaster

GUARANTEED WINS!

*Displays in seconds*Forecasts*StarBets*Bankers*
Form Finder II has been produced with the fixed odds clients very much in mind. And because Bankers (best homes) selected by the program have an 80% minimum guarantee, we can confidently predict a suitable perm, eg.8 from 10 Bankers, on your long list, will bring you wins within 13 weeks, including any stakes lost in that period. Your program gives you the various choices of bets that you can make that are covered by your guarantee.

Form-Finder II's unique formulas consistently produce results even on the extremely difficult sections list. Whether your bet preferences are for pools, individual bets, fixed odds or any other football forecasts, Form Finder II is the one complete package that is a 'must' if you want to take more than chances!

*Displays in seconds: *Pools values
match or coupon numbers

For your copy of Form Finder II complete the priority order form below and send to ALLAN DATA
1 Lorn Road, Dunbeg, Connel,

Printer codes – and solutions

I REFER to the letter from S. Thompson in the November 1986 issue of *Electron User* regarding View printer drivers.

I purchased a copy of Acornsoft's View printer driver from a dealer in Stanstead, Essex. The first cassette I received would not work on my Electron, though it did work on a friend's BBC B.

I returned this cassette and received another one which carries the reference number SBB16/C.

This cassette works perfectly on my Electron and allows me to produce very versatile printer drivers for use with my Epson LX80 printer.

One problem I found with the first drivers I produced was that if the SHEETS command was used on long documents, all the printer highlight commands set at the top of the first page were deleted from page 2 onwards.

I solved this problem by answering No to the question "Include printer initialisation?" when compiling the drivers.

The LX80 does have an initialisation code – ESC @ – and I had put this in to the first drivers I had produced.

However, this code resets the printer to the power-on state and is sent when Return is pressed to start printing, hence the loss of the highlight codes.

It would of course be

possible to repeat the highlight codes at the top of each page, but this is tedious.

The LX80 does not need this code to start printing and a highlight code is included in the printer driver program which allows all previous codes to be reset.

I hope this information will be of help to other Electron users. – J.A. Terry, Basingstoke, Hampshire.

Batting technique

I AM writing in response to Andrew Warriner's plea for help with Ian Botham's Test Match in the November 1986 issue of *Electron User*.

I too had problems until I went to the Electron and BBC Micro User show at UMIST. I asked the man at the Tynesoft stand if it was possible to bat and he revealed the secret. This is how it is done:

As the bowler is running up, hold down the desired direction key and when the

ball reaches the wicket after its delivery, it will stop dead.

Hit the Return key as soon as the ball has stopped and the batsman will swing his bat.

If the Return key is hit at exactly the right moment, the batsman will hit the ball in the appropriate direction.

I hope this is of some help but be warned – the game is not easy!

I have never beaten the computer yet and I think Tynesoft could have made the game a little easier. — Debbie Kirkman, Leyland, Lancs.

Disc options

I HOPE to buy a disc system for my Electron but without specialist knowledge of disc technology it is difficult to choose between the various manufacturer's products.

Could you consider running an article which weighs up the pros and cons of each system?

I am attracted to the Plus 3 largely because it is cheap – about half the cost of an AP4 + disc drive.

But I am put off because you of all people appear to ignore it as a piece of hardware and hardly anybody seems to sell software for it.

As the official Acorn product, how about a regular article on it?

Your June 1986 review of the AP4 interface talked about "Disc drive compatibility at long last". What is the problem with compatibility with the Plus 3?

I would certainly opt for a Plus 3 if 3.5in disc software

for the BBC Micro and the new Acorn Compact will run on the Electron. – C. Talbot, Pitlochry.

● We have published reviews of three disc systems for the Electron – the Plus 3, (March 1985), Cumana interface (July 1985) and ACP's Plus 4 (June 1986).

These articles discuss in detail the pros and cons of each system.

A 10 part series devoted entirely to the Plus 3 ran from October 1985 to July 1986.

This covered topics such as libraries and directories, sector editors, automatic menus, extra commands and random access filing.

There isn't much disc software available but you can swap discs with Compact owners and try their software – not all of it will run of course but it's worth experimenting.

The Compact drive is double sided but if the discs are formatted single sided there shouldn't be any problems.

All BBC B software is on DFS format discs and the ADFS can't access these.

Demand and supply

HAVING bought a Plus 3 some years ago, I have been dismayed at the support the unit has received from the major software houses.

The astonishing fact is that companies feel that the demand for Electron disc software is too low to justify a special version.

This fact was further

Faster database

SOME time ago I took advantage of your offer of the Data Manager pack including the Plus 3 and Acorn Electron Database.

I find it very useful but slow when using a large number of fields and records as it needs to frequently access the disc.

I have recently bought Advanced Computer Products sideways ram. Do you know if I can load all or part of the database programs

into sideways ram and run it as if it were a disc to speed up operations?

If this is possible I would be very grateful if you could tell me how as I find the ASR instructions a little difficult to follow. — Jeffrey Lee, Plumstead Common, London.

● You can put the database in sideways ram but you would be unable to run it and the ram can't be used as a ram disc.

From Page 47

supported by Steve Botterill of Superior Software who stated: "If the demand is there we'll supply it. If we get say 500 letters then that will justify it."

So Electron disc users the ball is in our court. Let's put pen to paper and show them that there is a demand way above anything they may have anticipated. — Y. Mwanza, Isleworth, Middx.

Boxing clever

REGARDING Simon Smith's letter in the October 1986 issue of Electron User concerning the quality of Electron games, I find it hard to believe that he expected to become an ace at Boxer within ten minutes of playing it for the first time.

It took my brother and

WHAT would you like to see in future issues of Electron User?

What tips have you picked up that could help other readers?

Here is your opportunity to share your experiences.

Remember that these are the pages that you

write yourselves. So tear yourself away from your Electron keyboard and drop us a line.

The address is:

**Micro Messages
Electron User
Europa House
68 Chester Road
Hazel Grove
Stockport SK7 5NY.**

myself nearly two hours to even reach the second screen.

I would have been more cross with Acornsoft if they had made the game easier than if they had made it harder.

A year ago I would have been inclined to agree with him about the games being poor quality.

But with software like Citadel, Way of the Exploding Fist, Rick Hanson and so on, it is extremely

unfair on software companies to call some of their recent products poor.

Admittedly, Jam Butty is not the easiest of games to play, although with a bit of patience it soon becomes possible and quite enjoyable.

Another thing that people often write in about is the graphics with Electron games.

Surely they do not expect to keep up with something like the Commodore 64,

when the Electron has only half the memory. Personally I would prefer a good game with average graphics, rather than vice versa.

Finally, thanks for the debugging sections, they are very much appreciated.

— John Tipper, Newbold Verdon, Leics.

Keyword functions

I HAVE subscribed to your excellent magazine for over a year now and enjoy typing in programs and debugging my attempts.

Even though the Electron has access to 29 complete Basic keywords by using the Func key and one other, there still remain quite a lot of Basic words common to most listings, such as MOVE, SOUND and ENVELOPE, which are not defined.

The following short program uses the user-definable keys f0 – f9 for most of the other common words and commands not already defined.

```
10 REM Function Keys
20 *KEY0 "TAB"
30 *KEY1 "DEF"
40 *KEY2 "MOVE"
50 *KEY3 "SOUND"
60 *KEY4 "ENVELOPE"
70 *KEY5 "DATA"
80 *KEY6 "READ"
90 *KEY7 "SCOL"
100 *KEY8 "STRING"
110 *KEY9 "CHR"
```

Run the program, type NEW and enter your own listing. — SSGT Ray Haydock, BFPO 15.

Stocks and shares

I WONDER how many Electron owners became interested in stocks and shares through buying Telecom and Britoil shares.

Or put another way, I wonder how many first-time

Keeping the score straight

YOU may like to hear of the latest use I have found for my Electron. Having read your magazine since its start, I have not read of anything similar.

I am reasonably competent with the basics of Basic but am by no means an expert.

However, I was able to create a program that allows me to conduct meetings with my staff using an Electron and 26in colour TV instead of a flip chart.

The main reason for my writing, however, is the program for my employer's product knowledge competition.

Visionhire hold a competition every year sponsored by Philips and Pye. The final was on the 21st of October 1986 at the Forum Hotel in London with John Motson (BBC Sport) as quiz master.

All the Visionhire directors were present plus marketing executives from Philips, Pye and Toshiba.

An audience of 150 watched the competition, the prizes being a week in

Portugal for the top team — three people and their spouses.

My part was first a welcome message then a scoreboard, keeping everyone updated via two 37in Philips colour TVs (yes 37in), and John Motson via a 12in monitor on his desk.

I used an aerial amplifier and splitter to feed the Electron signal the three ways.

As well as keeping score and sorting into the new order after every points input, my program also gave the six round numbers in colourful screen Mode 2.

I pinched part of a listing from Electron User that enlarged any letters or figures up to full screen size.

To be honest, I also used bits of other listings from Electron User for certain jobs — like the bubble sort and double height letters.

Also I learned about VDU5 and VDU4 to produce 3D text and the end result looked rather good (modesty not being my strong point!).

However, other parts were all my own work

including scrolling contestants' names across the bottom of the welcome screen and the design of the scoreboard layout — that being drawn once — with the teams and scores reprinted each time in a text window.

The final result was about the tenth version of the original and I had to break it into three programs to save memory — intro, semi, and final.

A simpler version was used for the area and regional heats — I sent a copy to my counterpart on each region via a cassette plus written instructions.

It was more trouble to make it workable by a third party than to write in the first place!

For instance the training officer on region four suddenly found a score of 2 became 22 or even 222! I had to disable auto repeat in the next version!

The winners in the final were the team from Tyne and Wear — now off to Portugal in May 1987. — I.B. Wiggs, Lincoln.

buyers of shares went out and bought themselves an *Electron* to evaluate their portfolio or their tax liability, or even to assess their liability to capital gains tax. I know I did.

At the same time I was fortunate enough to find a night school course running an elementary computer programming course.

Unfortunately it was for ten weeks only but by that time I was getting used to writing simple programs in Basic.

And indeed I did progress to writing structured programs covering portfolio evaluation and my personal tax liability. But then I came to a full stop!

As you know, one of the things a computer can do speedily is produce graphs, charts and histograms.

These are very useful to an active investor in the evaluation and comparison of company shares using both historical and current share price information.

My night school could not get sufficient people together to warrant running a higher level course and so I couldn't enlist the aid of the tutor in helping me to understand and write charting programs.

I've searched in every book on the *Electron* that I've been able to get my hands on but though one or two cover graphics none appear to cover the subject of charts.

Can you recommend any publication that covers this subject in sufficient depth to aid me in programming the *Electron* to produce charts and histograms?

Alternatively would it be possible for one of your contributors to publish a series of articles on this subject? — J.E.Howarth, Penwortham, Preston.

● We have published many programs to produce various graphs in the past and you should be able to adapt one of these.

You'll find a graph in the April 1985 issue and a pie chart in the January 1985 issue of *Electron User*.

There are also multi-coloured three dimensional bar charts in the January 1985 and July 1984 issues.

ALL programs printed in this issue are exact reproduction of listings taken from running programs which have been thoroughly tested.

However on the very rare occasions that mistakes may occur corrections will be published as a matter of urgency. Should you encounter error messages when you type in a program

they will almost certainly be the result of your own typing mistakes.

Unfortunately we can no longer answer personal programming queries concerning these mistakes. Of course letters about suggested errors will be investigated without delay, but any replies found necessary will only appear in the mail pages.

Heavy calibre

I AM just writing to congratulate Superior Software and Acornsoft on their fabulous game, *Galaforce*.

I have had it since October and have so far reached zone 25. I think it's brilliant and I hope for more games of the same calibre in the future.

I also think your magazine is excellent, keep it up. From a great fan. — Paul Twigg, Irvine, Scotland

Stored commands

I AM a long standing reader of *Electron User* and I was wondering if you could help me with a problem I have with *View*.

Everything seems to work fine until I try to use some stored commands.

After these are entered and the document printed out on my Amstrad DMP 2000, the entire line where the command is situated is deleted from the text.

This affects HT in particular, used with your *View* printer driver in the August 1986 issue, although I have also noticed it happens with other commands such as LM.

I have followed the instructions in the *View* manual and the printer driver article to the letter.

I have checked and double

checked the printer driver program and I am convinced that there is nothing wrong with the printer or printer lead.

I would be most grateful if you could suggest where I may be going wrong as I am beginning to think there is something wrong with *View* itself. — D.A. Colclough, Styvechale, Coventry

● There is nothing wrong with *View* or your equipment but you may not be using it correctly.

Stored commands should be on a line by themselves with no other text. When the file is printed the commands are executed and the rest of the line is skipped.

The text is printed as normal and you won't see the blank line on paper.

Screen scrolling

I THINK your magazine is great reading and terrific value. My favourite parts are *Software Surgery* and *Micro Messages*. Could one of your resident programmers write a program that scrolls the screen one bit at a time in any direction? I had a go, but failed dismally. — Matthew Rowley, Tamworth, Staffs.

● Scrolling the screen one bit at a time is both complicated and slow. We would advise avoiding it if possible.

Here's a short routine and a demonstration showing how to scroll a Mode 6 screen left one byte at a

time. This is much easier and faster.

```
10 REM Screen Scrolling

Chess problem

I AM a relative newcomer to the computer world and find your magazine a great help, particularly the advice on Basic and bug problems.

Recently I got a copy of Acornsoft Chess and find it impossibly slow. Is there any way I can speed it up?

Failing this can you recommend a program that is fast enough and difficult enough to give a reasonable game? — D.J. Gormley, Weston Coyney, Staffs.

● Acornsoft's Chess is rather slow and the only way to speed it up is to upgrade your *Electron* by adding Slogger's Turbo Driver.

Have any of our readers come across a particularly good chess program?

If you want more with your micro than just playing games, this package is your ideal introduction to the four most popular applications for professional computers. All the programs have been designed for simplicity, so even a child can use them. Yet they include advanced features not yet available on programs costing many times as much!

***Finalist for the Home Software
of the Year Award***

MINI OFFICE

Contains 32 page booklet giving clear, easy-to-follow instructions on all 4 programs

Word Processor: Ideal for writing letters and reports. There is a constant display of both time and word count, plus a words-per-minute display to encourage the budding typist! A unique feature is the double-size text option in both edit and printer mode – perfect for young children and people with poor vision.

Database: You use this for storing information, just like an office filing cabinet. Facts you have entered can be quickly retrieved by just keying in a word or part of a word. They can be sorted, replaced, saved for future use or printed out.

Spreadsheet: Enables you to use your micro for home accounts or pocket money records. It creates a display of numbers in rows and columns. Continuous updating is possible, and a changed figure can be instantly reflected throughout the rest of the spreadsheet. Your results can be saved, to be used for future updates, or can be fed into its associated program . .

Graphics: Part of the spreadsheet section, it lets you draw bar charts, pie charts and histograms to give a graphic presentation of your statistics. Helps to give life and colour to the dullest figures!

More great Electron games

This month we introduce a new volume in our Ten of the Best series - 10 more games to give you many hours of fun and entertainment.

These three packages are crammed with the best games from the last 18 months of Electron User. As an added bonus a previously unpublished game has been added to each one - stunning machine code masterpieces from our technical wizard, Roland Waddilove.

So give yourself a treat... with the most popular games compilations we've ever produced.

ONLY
£5.95 tape
£6.95 3½" disc

Jam Butty

Volume 1

Jam Butty: Machine code simulation of high drama on a building site.

Golf: Play a round by yourself, or play against your pals.

Haunted House: Fight against all the odds to get out alive.

Space Hike: Another classic. Help the spacemen avoid marauding monsters.

Park's Peril: Help Parky through an invisible maze, racing against time.

Rally Driver: All the thrills of high-speed driving, with none of the risks.

Alphaswap: Your letters are in a twist. Can you put them in order?

Knockout: Fast and furious action as you batter down a brick wall.

Money Maze: Avoid ghosts and collect coins in an all-action arcade classic.

Lunar Lander: The traditional computer game specially written for the Electron.

Atom Smash

Volume 2

Atom Smash: Machine code thrills as you help to save the world from destruction.

Bunny Blitz: Go egg collecting, but keep away from the proliferating rabbits.

Castles of Sand: Build castles - but beware the rising tide and hungry sandworms.

Reaction Timer: Test your reactions with this traffic lights simulation.

Solitaire: The Electron version of the age-old game of logic and patience.

Jumper: Jump for your life in this exciting arcade action game.

Break free: Test your wits and reflexes in this popular classic ball game.

Code Breaker: Crack the code in a colourful if frustrating brainteaser.

Parachute: Save the plunging sky divers from a watery end.

Star Fighter: Attack the bandit ships in this fast-moving 3D punch-up.

Rockfall

Volume 3

Rockfall: Come diamond mining in this fun packed game with its own screen designer.

Karate Warrior: Win your black belt in this gruelling test of karate skill.

Grand Prix: Battle your way into the lead in this tricky racing simulation.

Invasion Force: Can you survive wave after wave of relentlessly advancing aliens?

Grebit: Guide the frog across the busy road then across the fast-flowing river!

Fruit Worm: Steer the worm towards the fruit while avoiding rocks and its ever-growing tail.

Manic Mole: Watch out for melting platforms and conveyor belts in your quest for jewels.

Skramble: Fly your fighter fast and low over the landscape to penetrate enemy territory.

Mr Freeze: You'll need speed and strategy to reach the ice blocks before they melt away.

Paint Roller: Steer a speeding roller, run over paint pots but keep clear of the rocks.

Scoop purchase for subscribers!

★ This is THE ultimate guide to the Electron

These offers only available with a subscription order. Existing subscribers can take advantage of this offer

This detailed guide to the Electron's operating system is a must for every serious Electron user. In its information packed pages you'll find:

- ★ Full details of how to implement the powerful *FX/OSBYTE calls.
- ★ Page ROMs revealed: The way they work and how to write your own.
- ★ Programming the ULA - all you need to know.
- ★ Full coverage of memory allocation and usage - make every byte count.
- ★ Complete circuit diagram: How to use the expansion capabilities Electron's exciting to the full.

and much, much more...

Quite simply, the *Electron Advanced User Guide* is THE essential handbook that will allow you to exploit the full potential of the Electron.

Make sure of your copy by subscribing to *Electron User* and taking advantage of this money-saving offer!

Only £3.45 (Inc. P&P)

Save a massive £6!

Normal price £9.45

Existing subscribers can also take advantage of this exceptional offer.

Exclusive offers ONLY for subscribers to Electron User

This fast-moving zap and blast game wowed the reviewers. Now we're making it available to you at a never-to-be-repeated price.

Was £7.95

NOW £3.95

You save £4!

ONLY £3.95

Your Electron needs protecting!

Protect your Electron with our luxury dust cover made of soft pliable water-resistant vinyl, bound with strong cotton and decorated with the Electron User logo.

Keep your copies neat and clean!

This handsome binder is bound in attractive red pvc with the Electron User logo in gold blocking on the spine. It will hold 12 magazines firmly secured in place by metal rods.

ONLY £3.95

SALE!

This could be your last chance
to build up a library of fun and
knowledge from our back issues!

Bundle 1
3 issues of
Electron User

May to December 1984

Everything you ever wanted to know about graphics on the Electron is contained within these issues. Ready made characters, drawing utilities, multi-coloured aliens, double height text, circles and ellipses – they're all here!

Bundle 2
5 issues of
Electron User

January to June 1985

Packed with some of the best games we've published from fast arcade action to mind boggling adventures. Save the Earth in Space Battle, escape from the maze in Craal, skim over alien planets in Skramble and go Grand Prix racing.

Bundle 3
5 issues of
Electron User

July to December 1985

An absolute must for Electron programmers containing three great series. Learn to write machine code games using sprite routines, make the most of your micro's operating system using FX calls and explore your Plus 3's ADFS.

£5.90 each bundle

— and don't forget a binder to keep them in – it's only £3.95.

To order, use the form on Page 53

Programs from back issues of Electron User – on tape!

January 1987

Grid Warrior Battle with alien gladiators deep in space. **Mode 7 A** Mode 7 simulator providing teletext graphics. **Smiley Hunt** The final version of AI's scintillating magagame. **10 Liners** Zap the alien intruder and dodge the asteroids. **Lister A** utility to enable you to list programs directly from disc or tape.

December 1986

Santa's Sleigh Help Father Christmas fill his sleigh with presents in this fast arcade game. **Yule Spell** Spelling can be fun with this seasonal variation on the old favourite hangman. **Pogo A** Logo turtle graphics compiler. **Function Key** Lister Keep track of your function key definitions with this helpful utility. **10 Liners** Two short but impressive graphics demonstrations.

November 1986

TRAIN TROUBLE You've just robbed a bank. Can you escape the forces of law and order in this chase over the carriages of a fast moving express? **DAY AT THE RACES** You can gamble away to your heart's content in safety with our entertaining two player horse racing game. **BASIC COMPILER** This superb utility will turn your Basic programs to machine code in no time at all. **10 LINERS** A routine from our fascinating series of short programs.

October 1986

RAT CATCHER Try your hand at pest control with this fast action arcade game. **MATHS RUN** Put your powers of mental arithmetic to the test with this educational program. **BOS** This on screen editor will take the tedium out of debugging listings and sort out your typing slips. **CROSSWORD** Two programs for crossword lovers – one to design crosswords and the other to help you solve them. + **BONUS game:** **QUASIMODO'S QUEST** Rescue Esmerelda in this colourful version of the all time favourite.

September 1986

CAVERN CAPERS Blast your way from the depths of the labyrinth to escape from the planet. **DRAW WRITER A**

superb utility to translate your on screen graphics to the procedures to create them. **COMPANY COUNT** Work your way up the company pecking order in this educational maths test. **TEN LINERS** Another short but fascinating program. + **BONUS game:** **ROCKFALL** Go diamond mining in this intriguing multi-screen arcade romp.

August 1986

HOWZATI A vivid recreation of a day's test cricket for two players. **3D MAZE** Quick reactions and a sense of direction are needed to escape from our twisty maze. **TEXTED** Let this versatile text editor turn your micro into an electronic typewriter. **DRIVER** A powerful printer driver for View.

July 1986

ROYAL WEDDING Celebrate the royal event with our ingenious sliding block puzzle. **SNAPDRAGON** Two player version of the classic card game. **ATTRIBUTES** Colourful two player strategy game. **FORMATTER** Make your listings easier to read. **DISCS** Extended star commands. **EXTRA COMMANDS A WHILE . . . WEND** command for your micro. **PLUS** superb digitised picture of Andrew and Sarah.

June 1986

FISHING Enjoy a quiet day by the river, and maybe catch your tea as well! **TACTICAL PURSUIT** A two player strategy game played with pawns on a chess board. **MINIBASE** Create an electronic telephone directory. **EXTRA COMMANDS** Add more commands to Basic. **SCREEN DUMP** Multi-tone screens dumps for Epson compatible printers.

May 1986

MISSILE JAMMER Defend the city of Pezins from a missile invasion. **VECTOR LETTERS** Use *LINE to create double height text. **DEGREES** Convert from Centigrade to Fahrenheit and vice-versa. **CROCODILE TEARS** Spell well or end up as a crocodile's dinner. **ZAP** Blast the marauding aliens. **EXTRA COMMANDS** Adding new keywords to Basic.

April 1986

INVASION FORCE Exciting zap 'em

space game. **EASTER EGG HUNT** Seasonal game using compass points. **BACH TO BASICS** Music tutor. **NOTICE BOARD** Text scrolling utility. **SEARCH and RECOVER** Two routines from the disc article. **NOTEBOOK** Recursion backwards.

March 1986

GRAND PRIX Exciting race game. **DICER** A clever test of strategy. **MARCHING ORDER** Counting and ordering numbers. **FIND AND REPLACE** Useful editing program. **SECTOR EDITOR** Excellent disc utility. **TIMEPIECE** Superb graphics demonstration. **OXO** Game of cunning. **TRICIRC** A circle of triangles.

February 1986

NECROMANCER Superb text adventure. **GREBIT** Arcade action. **FAST BACKUP** Disc utility. **MACHINE CODE** How to write an arcade game. **TAPEDISC** More software transferring techniques. **SIDEWAYS RAM** Example program.

January 1986

FRUIT WORM An arcade classic. **HELICOPTER RESCUE** Pilot an air sea rescue helicopter. **MACHINE CODE** Detect collisions between sprites. **TAPEDISC** Transfer your software to disc. **MODE012** Multi-Mode screens.

December 1985

GET SET SANTA Christmas fun collecting presents. **MISSILE ATTACK** Save your cities! **PROGRAM PROBE** Using joysticks. **SPACE COUNT** Counting for youngsters. **CHRISTMAS CARD** Cards and carols for all. **DISC MENU** Disc Menu creator.

November 1985

KARATE WARRIOR Electrifying combat. **ULA** Mode 6 Mode 7! **PAINT ROLLER** Colourful arcade action. **DEFUSE** Beware the bombs. **SPRITE PRINT** Machine code graphics utility. **TRAIN** Far from stationery graphics.

Save wear on your fingers and ensure all your programs are error-free by using our monthly tapes. They are only £3.75.

To order, use the form on Page 53

DURING the course of developing programs in Basic I often encounter programming problems to which I have already found solutions in previous programs.

But one of the bugbears of writing large programs in BBC Basic is the lack of any substantial facility for transferring macros, snippets of programs or routines from tape or disc into memory.

Sections of programs can be saved to disc or tape by *SPOOLing them. Later they can be *EXECed back into another program.

To some extent the use of *SPOOL/*EXEC helps.

But this is quite long winded if the routine you want is very short or you just want to check one line of a program to see how you solved a particular programming problem.

The trouble is that you must save the program you're writing and load the program you want to crib from.

Then you must either print or write by hand the routine you're after, reload the program under development and type in the additional lines.

Lister is essentially a fast cribbing utility which enables you to list a program directly from tape or disc without corrupting the program in memory.

Enter and run Lister to set up the machine code. It is assembled to page &C so save it with:

*SAVE LISTER C00 D00

To use Lister:

*LOAD LISTER
CALL &C00

and enter the filename of the program you want to list.

Don't forget you can freeze the display with Control+Shift and you can enable paged mode before calling Lister with Control+N.

You can escape at any time but if you do you'll need to close the file with:

*CLOSE

If you're using user-defined characters you'll

need to load Lister each time you want to use it.

If you're not, load it before you start a programming session and it's there whenever you need it - just call &C00.

Lister occupies page &C and to make it as compact as possible the utility uses many built in Basic rom routines.

To ensure that Basic is paged in the rom number (10 or 11) is stored in the ram copy at &F4 and rom paging register at &FE05.

This enables the utility to run directly from disc by typing *LISTER since in this case the ADFS or DFS rom would still be paged in. Tape owners must *RUN LISTER.

Having ensured that the Basic rom is paged in it then prompts you for a filename.

A routine at &BFCE prints the prompt string and osword is used with the accumulator set to zero to input the name. The resulting string is stored at INBUFF.

The file is opened and read one byte at a time using osbget. If the byte is &0D the routine line is entered to print the line number which follows.

The routine at &991F is used which expects the two byte line number in the two

least significant bytes of the Basic integer accumulator INTA which comprises the four bytes &2A to &2D.

If the byte read from the file is greater than &80 it must be a tokenised Basic keyword. The rom routine at &B50E is used to expand and print a token.

If the byte is &8D this indicates that a tokenised line number follows and is found following GOTOs and GOSUBs.

The subroutine *linetoken* takes the three byte tokenised line numbers converts them to a two byte form and calls &991F to print it.

All other bytes are assumed to be Ascii characters and are printed as normal.

Lister is an invaluable utility which will speed up program development.

It's so useful you'll wonder how you ever managed without it. ■

IAN JONES offers a fast cribbing utility to help you develop Basic programs

BBC/ELECTRON PROFESSIONAL SOFTWARE

*Our educational software is used in thousands of schools and homes
throughout Great Britain.*

EDUCATIONAL 1

BBC/ELECTRON

Tape £6.95 Disc £8.95

Hours of fun and learning for children aged five to nine years. Animated graphics will encourage
children to enjoy counting, maths, spelling and telling the time. The tape includes six programs:
MATH 1, MATH 2, CUBECOUNT, SHAPES, SPELL and CLOCK.

... 'An excellent mixture of games' ... Personal Software - Autumn 1983.

EDUCATIONAL 2

BBC/ELECTRON

Tape £6.95 Disc £8.95

Although similar to Educational 1 this tape is more advanced and aimed at seven to twelve year
olds. The tape includes MATH 1, MATH 2, AREA, MEMORY, CUBECOUNT and SPELL.

FUN WITH NUMBERS

BBC/ELECTRON

Tape £6.95 Disc £8.95

These programs will teach and test basic counting, addition and subtraction skills for four to
seven year olds. The tape includes COUNTING, ADDING, SUBTRACTION and an arcade type game
called ROCKET MATHS which will exercise addition and subtraction. With sound and visual
effects.

'These are excellent programs which teachers on the project have no hesitation in
recommending to other teachers.' ... Computers in Classroom Project.

FUN WITH WORDS

BBC/ELECTRON

Tape £6.95 Disc £8.95

Start your fun with alphabet puzzle, continue your play with VOWELS, learn the difference
between THERE and THEIR, have games with SUFFIXES and reward yourself with a game of
HANGMAN.

... 'Very good indeed' ... A&S Computing - Jan/Feb 1984

JIGSAW AND

SLIDING PUZZLES

by P. Warner BBC/ELECTRON

Tape £6.95 Disc £8.95

There are two jigsaw and four sliding puzzles on a 3 x 3 and 4 x 4 grid. Each program starts off at
an easy level to ensure initial success but gradually becomes harder. It helps children to develop
spatial imagination and in solving problems. The tape includes: DBLONG, JIGSAW, HOUSE,
NUMBERS, CLOWN and LETTERS.

Get the most out of your Plus 1

JOE PRITCHARD starts a new series on the multitude of jobs this analogue interface can handle

MANY Electron owners, having hammered the living daylights out of the keyboard of their machine playing yet another game of "zap the green things" no doubt bought a Plus 1 to use joysticks and help preserve the keyboard.

However the Plus 1 is more than a simple joystick port and in this short series I'll explain in simple terms this aspect of its hardware.

We'll look at some of the many different devices we can plug into it, the software needed to access it and also provide a few ideas for applications.

For those of you who've read things like "minimum impedance of 10k ohms" or "heat sensitive transducers" in the Plus 1 User Guide and have given up in disgust, don't worry — we start off this month with a beginners guide to the world of analogue and digital systems, volts and ohms.

The joystick port on the Plus 1 is also known as an analogue interface and as we'll see, provides us with a means of sensing what's going on in the world.

You might be aware that your Electron only understands two things — yes and no, true and false, 0 and 1, call them what you will.

Everything that the Electron does can be thought of as ultimately involving a chain of these yes/no decisions.

Indeed, the actual electrical signals that whizz around the Electron's innards are also of two values, 5V, which we often call high or 1, and 0V, which we often call low or 0.

The term digital computer

is given to machines that carry out their work using these digital signals. The Electron therefore understands only two levels of electrical voltage — 0V and 5V.

Of course the real world isn't like this at all. For instance, it doesn't change from bright sunshine to darkest night whenever a cloud passes over the sun; we have a gradual fall in the light level and a gradual

increase as the cloud passes.

A further example is the gradual increase in the speed of a car as you press the accelerator. The speed increases smoothly from 0 to 60 rather than suddenly jumping.

Such systems, in which properties change smoothly over a range of values, are called analogue systems.

A digital system will have a finite number of allowable

values, whereas an analogue one can have an infinite number of values; each slightly different from the others.

The analogue port of the Plus 1 provides us with a means of getting the Electron to look at these smoothly changing quantities in the world.

An analogue quantity must be converted into an electrical signal — a voltage. This can be read and converted by the analogue port into a digital quantity — a number that represents it. For this reason the circuit in the Plus 1 that performs this feat is called an Analogue to Digital Converter or ADC.

The ADC takes an input in the form of a voltage and outputs a number corresponding to its size. The larger the voltage the bigger the number the ADC outputs. Figure 1 shows this diagrammatically.

Any quantity in the real world such as pressure, temperature, light, sound and so on can be converted into an electrical signal and can be measured using an ADC.

In a perfect world the conversion of an analogue quantity to its digital equivalent would occur instantaneously. But in reality the conversion takes a finite period called the conversion time.

Thus the output from the ADC can be seen as a series of snapshots of the input, each separated from the

Figure 11: ADC resolution

Figure 1: Analogue to digital conversion

Hardware projects

From Page 57

next by the conversion time.

This varies depending on the type of ADC and for our Plus 1's converter it's about 10 mS. That is one conversion every one hundredth of a second.

This might sound fast, but in fact it's quite slow when we think of some ADCs that gallop along at tens or hundreds of thousands of conversions per second.

ADCs usually give their output as 8 or 12 bit integers. The number of bits in the output is called the resolution of the ADC.

The resolution is simply a measure of the fine detail that an ADC can see in the input.

For example, let's say we've got an input signal of one unit to an ADC with four bit resolution - it doesn't matter what this unit is.

This ADC can output 2⁴ different numbers in the range 0 to 15. Suppose our input signal gives an ADC output of 15, and if we input 0 units we get 0 at the output.

This gives us, between 0 and 1 unit, 16 different output values. Figure 11 shows the analogue input and the digital output.

You can see that slightly different input voltages will therefore give the same output number. The values 2.0 and 2.4 will both give an output of 4.

To ensure that input signals of different magnitudes are distinguishable by this chip they have to be at least 1/16 of a unit apart. The resolution is therefore 1/16 of a unit.

If the input quantity is in volts, and 10 volts gives the maximum output, we'd say that the resolution is 10/

16ths of a volt.

If we increase the resolution of the ADC, we decrease the size of the steps and allow the ADC to register inputs with smaller changes as different.

It's a bit like the difference between a Mode 2 and a Mode 0 screen. Think of the screen pixel as the step size or resolution. The smaller the pixel is the more detail we can see on the screen.

The Plus 1's ADC outputs an 8 bit integer, thus it provides 2⁸ or 256 different numbers.

A low input voltage will give a zero digital output and the highest input voltage allowed will give a digital output of (2ⁿ)-1, where n is the number of bits of resolution that the ADC has.

Going outside the permissible voltage range can damage the ADC, so take

care. The input range for the Plus 1's ADC is 0V to 1.8V maximum.

After all this talk about ADCs we still have to provide a means of converting the real world quantity of interest into a voltage for the ADC to convert. This is done by a device called a transducer.

This is an electronic component which converts a physical quantity like motion, pressure, weight or light level into an electrical signal.

For instance a heat sensitive transducer converts changes in temperature into a changing voltage. This can then be fed into an ADC. We'll look at some transducers in future parts of the series.

● Armed with this information next month we'll take a look at the Plus 1's ADC in detail.

Ramming home more memory

JOE PRITCHARD tries out the Slogger Master Ram Board and enjoys having 28k of memory in any screen mode

THE Electron is a great little micro and it's amazing what can be done with it. However, nothing is perfect and it has its faults.

Apart from being a bit slow the Electron is also rather short on memory. The BBC Micro is much better off, being both faster and – when using the very memory efficient teletext Mode 7 – having around 7k more ram free.

The memory available on the Electron is further decreased when using high resolution and multicolour graphics modes.

And in Mode 0 with a Plus 3 (which also grabs a huge chunk of ram), you can just about fit a program in to print your name on the screen!

Admittedly I'm exaggerating, but the problem is there. Now Slogger has put an end to the days of "No room" and "Bad MODE" with its Master Ram Board.

This provides the Electron with a staggering 28k of memory in any screen mode and a few other goodies besides.

But first of all, how's it done?

The Master Ram Board adds 32k of shadow ram and is essentially the same as found in the BBC B+.

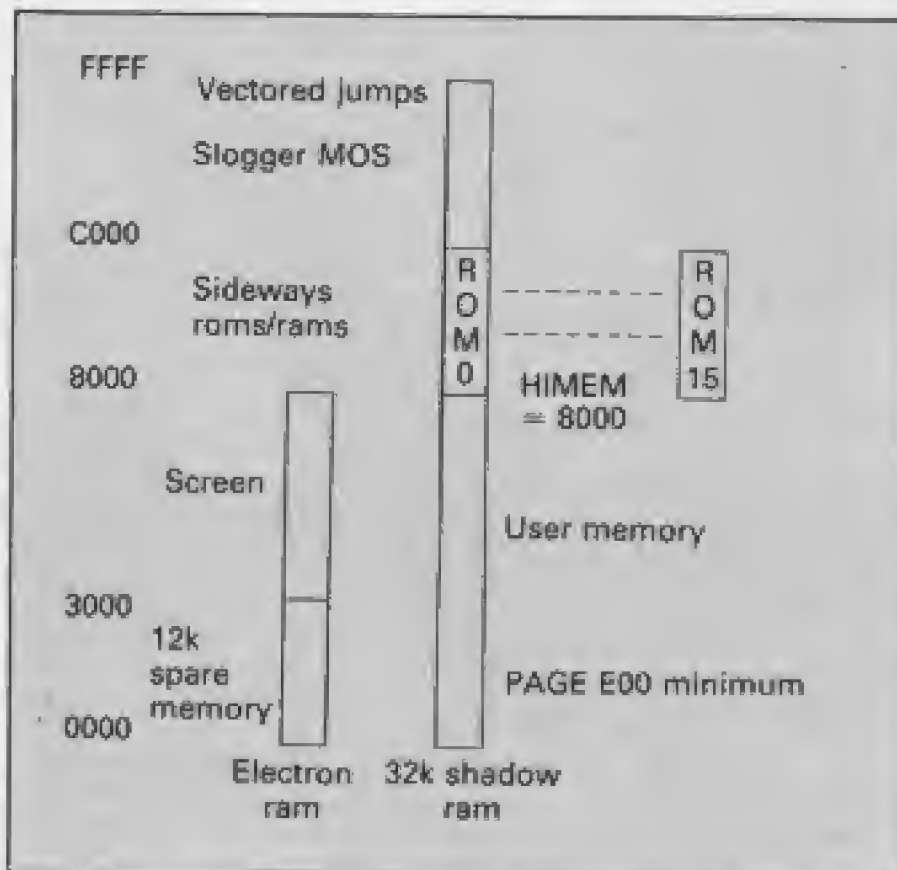

The operating system is patched and the Electron uses this extra ram rather than the built-in memory for your programs.

What this means is that the micro doesn't use any of the memory allocated for your program to store the screen display.

So, HIMEM is set to &8000 regardless of mode and whatever the operating system needs for the screen is taken from the built-in ram.

There are both advantages and disadvantages to this system as we'll see later.

An additional bonus is that Slogger's Turbo Driver is built-in with the shadow ram. This speeds up the Electron by as much as 300

The 64k memory map

per cent depending on the screen mode.

When it's on you can't access the shadow ram but it is useful for speeding up games and breathes new life into old software. You'll find a full review of this in the July 1986 issue of *Electron User*.

The Master Ram Board is fitted by Slogger; simply post your Electron to them and back it comes with the only visible change being a small three-way toggle switch on the left of the case.

This can be used at any time, even with the machine turned on, to change the operating mode of the Electron.

However, doing so crashes the computer and Control+Break is needed to reset the micro. This is quite normal.

The positioning of the switch gave rise to a small criticism of the board, in that I was working with the Electron on a crowded desk and all of a sudden it froze up.

Nothing at all wrong with the board, I'd just knocked something against the switch and accidentally changed the operating mode.

In the first position the Electron behaves as normal, in the second the shadow ram is switched in and in the third the turbo is switched on.

With the switch in normal

mode there is nothing untoward noticeable. The Electron acts as it always has.

Switching to shadow mode and pressing Control+Break produces the start up message Acorn Electron 64k.

HIMEM in all screen modes is then &8000 giving a maximum of 28k of ram free. The extra memory can be used by word processors, databases, spreadsheets, languages and so on.

For instance, word processors could have text files of up to 28k resident in memory and use either 40 or 80 column screen modes.

All legally written software will work but programs which use illegal methods – such as directly accessing the screen memory – will not run.

In both turbo and shadow ram modes there is quite a significant increase in performance.

Table 1 shows the timings for some simple programs running on the BBC Micro, standard Electron and Electron in either shadow or turbo mode – the speed is the same.

Test 1 was run in Mode 6 and calculated and printed the SIN, COS and TAN of the numbers 0 to 100. Test 2 was Test 1 carried out in Mode 0 to see the effect of changing mode.

Test 3 dimensioned and filled a 1000 element array in Mode 6, and Test 4 did the same in Mode 0. Finally, Test 5 drew 100 random

Hardware review

From Page 59

triangles in Mode 2.

As can be seen, as well as adding extra memory shadow mode also speeds up the Electron and is directly comparable to the BBC Micro.

In addition, there are no significant variations in the execution time of programs running in different modes, unlike the standard Electron.

The days of changing to Mode 6 to do your number crunching, then back to Mode 2 to display the results are gone with the Slogger board.

In shadow mode the Electron's built-in ram is used for the screen display while your program is in shadow ram.

Of course the screen memory doesn't take up all 32k of ram and the built-in ram that isn't being used for the screen from address 0

up to the screen start is free for your use. It can be used as a printer buffer or for data storage for instance.

This memory will be at least 12k and its actual size depends on the screen mode selected. With Mode 0, there is 12k to play with and with other modes that consume less ram there can be up to 20k free.

Basic can't make use of this extra memory, except indirectly. Access is by a new operating system call which allows you to read or write to it.

The fact that programs

run in shadow ram and that the screen memory is in the old Electron ram gives rise to the one unavoidable drawback with most shadow ram systems, not just this one.

Programs that access the screen memory directly will not work in shadow ram. So for some games you'll need to run the Slogger board in either turbo mode or normal Electron mode.

The Slogger board will give you more space and extra speed, but won't turn your Electron into a BBC Micro.

Test	Electron	Turbo	BBC
1	20.19	14.37	13.77
2	41.44	14.99	13.68
3	3.07	2.32	2.28
4	5.98	2.32	2.28
5	24.37	8.99	8.86

Table 1. Speed Tests in seconds.

Finally, the board provides a new operating system rom replacing the old. This has the same legal entry points as the Electron OS, and adds the new OS call mentioned above.

On the whole I liked it very much. It's a good piece of equipment which will no doubt find much use.

The increase in speed provided by the shadow ram will also be extremely valuable and the additional feature of the turbo mode for speeding up games is great.

I can thoroughly recommend it. ■

*Product: Master Ram Board
Price: £54.95 (kit), £64.95 (fitted)

ANNOUNCING ANOTHER GENERATION OF SOFTWARE BARGAINS FROM POTTER PROGRAMS "THE HOTTER PROGRAMS"

BRIDGEMASTER - Price: £5.95

An entertaining, 100% machine code simulation of bridge, suitable for the beginner and experienced player alike.

A comprehensive bidding system; a competitive playing algorithm; high resolution graphics and player interaction are all major features of this game which can be played in two ways.

1. Demonstration mode - The Electron bids and plays all four hands giving unlimited demonstrations of the bidding and rules of play.

2. Game mode - you bid and play the South hand while the Electron plays the rest. If you or North are in a contract, then you play both hands.

Superb value at only £5.95

POTTERS ARCADE 4 PACK - Price: £5.95

Four Arcade type games on 1 tape, which include:

THE THREE CRYSTALS - A three part, "3D" Arcade adventure for the serious arcade addict. Features 3 practice modes, pause and sound on/off options.

YARTSIE - An exciting computerised dice game for 1-3 players, which combines both chance and skill. Full playing instructions are included.

FRUTTY - A 4 reel Fruit Machine simulation with everything you would expect from your own personal fruit machine - superb graphics - rapid response - random holds, nudges up or down, shuffle feature. Choice of gambling winnings and a £50 jackpot.

HUNCHBACH - Enthralling arcade action as you help Quasimodo rescue Esmeralda. Joystick and sound options.

All four games truly tremendous value at only £5.95

POTTER'S ADVENTURE 4 PACK - Price: £5.95

Four typically fiendish text adventures on 1 tape which include:

INNER SPACE - Following a car crash your consciousness is hovering in the twilight zone between life and death - can you escape back to reality? There are over 100 locations to explore.

HEXAGRAM OF TRUTANIA VALLEY - To save your home valley from the evil forces of Tanell, you must find and assemble the legendary hexagram of Trutania - a powerful magic artifact. There are over 200 locations to explore.

STRANDED ON ILOOFRAZ - Stranded on the alien planet of Iloofraz, you must find a way back to earth. A challenging adventure with many detailed location descriptions.

PHILOSOPHER'S STONE - A quest to find the Philosopher's stone, used by alchemists to turn base metals to gold and it also confers eternal youth. Thrilling adventure action.

All four adventures terrific value at only £5.95

THE TWIN ORBS OF AALINOR - Price: £3.95

A very difficult and entertaining machine code fantasy adventure with data compression, giving approximately 20,000 characters of text. Features include a split screen display; score and rating system; interactive characters and well over 100 locations with detailed descriptions. Set in the Land of Aalinor, can you harness the power of the Twin Orbs to overcome the evil Gorgoroth?

FLINT STRIKES BACK - Price: £2.95

Once again our hero does battle with the hideous T.E.R.D. organisation. Can you save England from ruin? A real time adventure with over 100 locations and a multi-statement interpreter.

THE RETURN OF FLINT - Price: £2.95

This sequel to the very popular SUPER AGENT FLINT. As the Super Agent you have successfully docked you captured rocket with the British Space Station, only to find that it has been infiltrated by the dastardly T.E.R.D. organisation. This is where your mission begins.

SUPER AGENT FLINT - Price: £2.95

The dreaded T.E.R.D. (Terrorist for England's Ruin and Destruction) organisation has reared its ugly head. Only you as Super Agent Flint can capture their interstellar rocket and secret plans. "Quite fast and fun to play... at the price I must recommend it" Electron User.

GALADRIEL IN DISTRESS - Price: £2.95

The Princess Galadriel has been abducted and an evil spell holds her prisoner. You must seek aid from the Wise Lone Master to release her and save yourself from the wrath of King Theoden.

THE STAFF OF LAW - Price: £2.95

Can you track down the Staff of Law and master its potent earth power to defeat the Despoiser? "Extremely fiendish... well worth buying" Electron User.

GROUNDLED - Price: £2.95

A strategic adventure, set in a hostile tropical land. Only a calculating and aggressive mind can do battle with murderous beasts and make ancient magic to escape. Are you up to it?

All adventures with full save game facility for the Electron or BBC B.

SPECIAL OFFER on games priced £2.95 each.

ANY THREE games for £5.95 or FOUR games for only £7.95.

OR ALL FIVE games £9.95.

Please add 50p P&P per order (£1 for orders outside the U.K.). Also hint sheets available 20p each game.

PREDICTOR

If you've ever asked yourself (and who hasn't!) how your computer can help you on your way to a pool's fortune, here's some good news. The Mayday Software Pools Predictor. It's the expert system that's powerful and sophisticated yet easy to use. It comes with a massive database and, just as important, a track record of four highly successful seasons to back it up. So you can be confident you have your personal expert tipster taking the chance out of filling in your coupon. And completing this super punter's package, a free Racing Analyser program that will give you the low down on any horse race - without fuss!

1986/87 version now available for BBC, Electron and Spectrum (please state your computer when ordering).

Ravenskull Castle — The Fortress of Doom

Your task is to save the village of Austburg from imminent devastation. You must enter Ravenskull Castle and retrieve the silver crucifix which the evil Baron Strieg has stolen. Only then will Austburg be safe from the Zombies who inhabit the swamp surrounding the medieval castle.

Ravenskull is a massive arcade-adventure featuring smooth 4-way screen scrolling over the 4 levels of play. Each level is 64 times the size of the screen, and there is an initially-bewildering variety of game characters including: acid pools, man-eating plants, time-doors, keys, pick-axes, scythes, spades, bows and arrows, dynamite, bells, food and wine (beware! it may be poisonous or have strange side-effects). There are also several magical scrolls and potions to be found. These may be good or evil; for example the strength scroll gives you the power to push wooden casks, whereas the lightning-strike scroll is fatal if used.

The guardians of the castle, the vicious Ravenbees have to be avoided or, in some cases, destroyed — but there is only one way to kill them; you must discover how as you venture through the dark passages of the castle. Your quest is not an easy one — only with time, experience and a little luck will you unravel all the mysteries within Ravenskull Castle.

PRIZE COMPETITION

If you are skilful enough to complete Ravenskull, you can enter our prize competition. The prizes include a £100 first-prize, with Superior Software T-shirts for runners-up.
